ACE TELECOM · REPAIRDESK

Staff Portal User Manual

Create requests, place visit pins, assign technicians, see where technicians are, and read the attendance list.

AUDIENCE

Shop staff (counter / phone desk)

PORTAL

https://repairdesk-admin-portal.azurewebsites.net
Same screens: https://black-cliff-0c84a7c00.7.azurestaticapps.net

STAFF USERNAME

anita

PASSWORD AFTER FIRST CHANGE

Anita$1234

SCREENSHOTS

Live Azure portal, signed in as Staff

An administrator creates your account. The first sign-in asks you to choose a new password. Keep credentials private. The full index is in Staff-Portal-User-Manual.md beside this file.

Contents

1. Staff credentials and sign-in
2. What Staff can and cannot do
3. Dashboard, customers, and create a request
4. Service address on a new request
5. Jobs: assign, schedule, notes, photos, and status
6. Move a job pin and Start Navigating
7. Technician locations and customer ETA
8. Attendance — who started and ended the day
9. Appointments, notifications, and your account

1. Staff credentials

Field	Value
Portal URL	https://black-cliff-0c84a7c00.7.azurestaticapps.net
Username	`anita`
First-sign-in password	`Staff$1234`
Password after first change	`Anita$1234`
Role	Staff

> The first API call after the site has been idle can take up to a minute (cold start). If sign-in looks stuck, wait and try once more.

2. Sign in

1. Open the portal URL.
2. Enter your username and password.
3. Click **Sign in**.

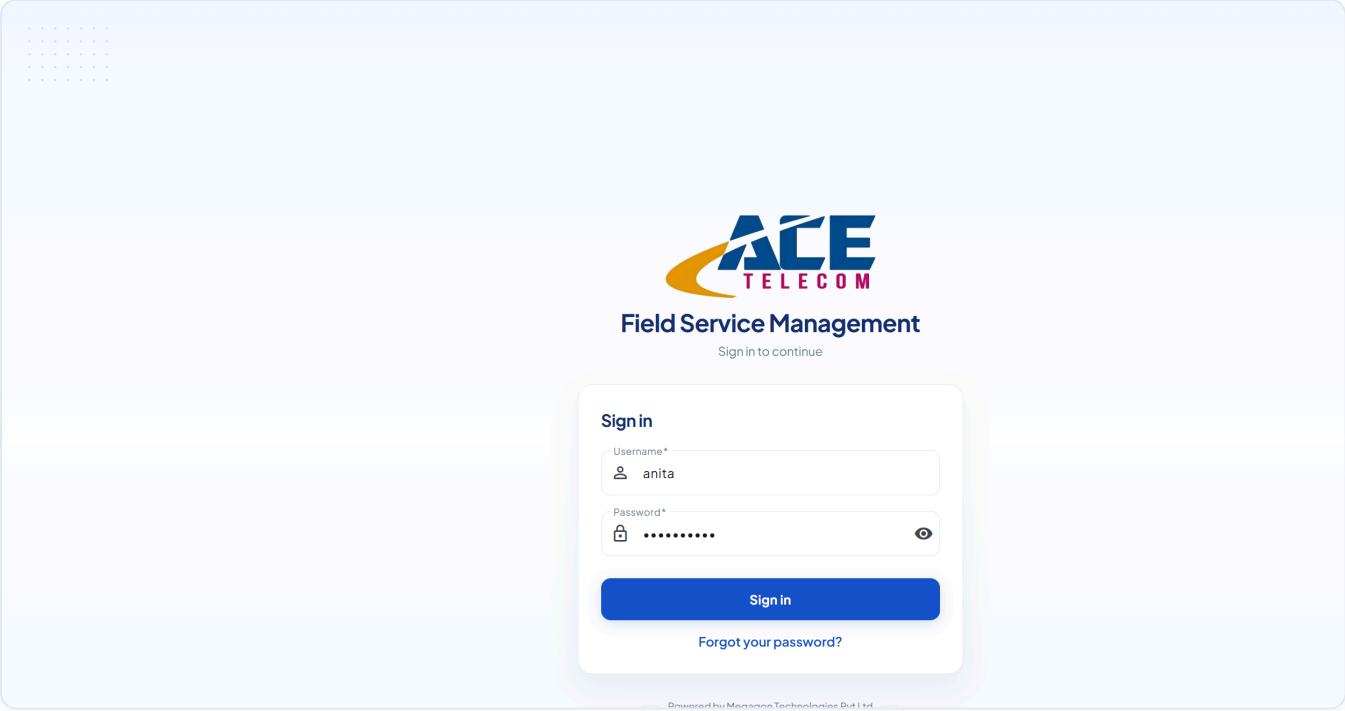

Figure 1. Sign-in as Staff (username anita).

2.1 First sign-in — choose a new password

If the account still uses the password it was set up with, you must change it before the dashboard opens.

1. Enter the current (temporary) password from your administrator.
2. Enter a new password (minimum 8 characters) and confirm it.
3. Click **Update password**.

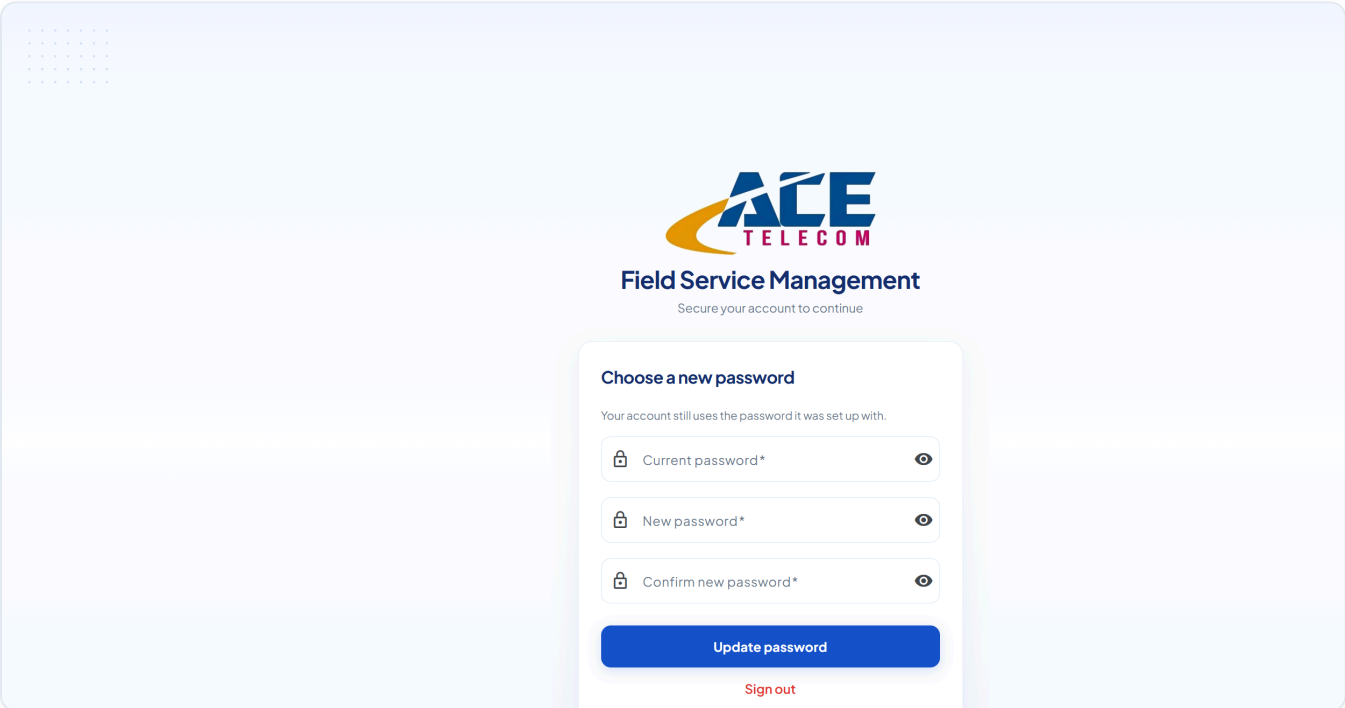

Figure 2. First sign-in password change.

3. What Staff can do

Staff work the counter and the phone. The sidebar is Dashboard, Repair Requests, Locations, Jobs, Appointments, and Customers. You cannot open Staff management, Device Categories, Business Settings, or Office location. Repair Requests opens a page that says review is limited to administrators — create the request from the dashboard instead.

You can	Where
Create a request, including the visit pin	Dashboard → Create request
Look up customers and their history	People → Customers
See technician positions and travel time	Work → Locations
Assign a technician, move the pin, schedule, add notes and photos	Work → Jobs → open the job
See the week's appointments and unscheduled jobs	Work → Appointments

After you create a request it is **Pending review**. An administrator approves it; that creates the **job**. You then assign the technician on the job — not on the Create request screen.

4. Dashboard

After sign-in you see your name and the Staff sidebar. Pending review is a count only. Active jobs and Unscheduled jobs open the job list. Create request is the intake shortcut. Locations is the technician map.

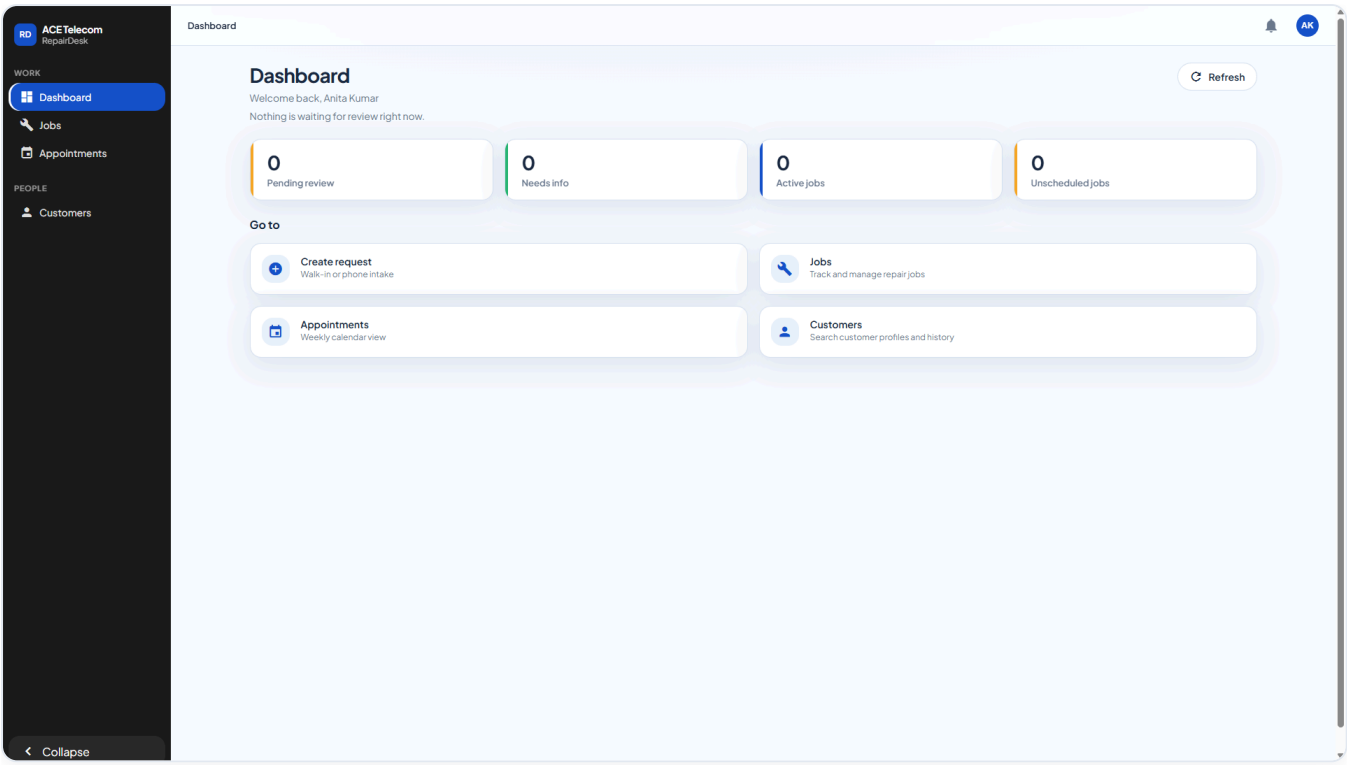

Figure 3. Staff dashboard. Use Create request for walk-in or phone intake.

5. Create a request

Use this when a customer walks in or calls and did not submit from the mobile app. The request is owned by them, not by you.

1. Dashboard → **Create request** (or Customers → open someone → New request).
2. Find or create the customer.
3. Check Contact for this request. You can edit name / mobile without changing their account.
4. Fill Request details: device type, optional brand/model, issue (at least 10 characters), how they contacted you, optional photos.
5. Click **Create request** →. **Save for review** parks the same pending request.

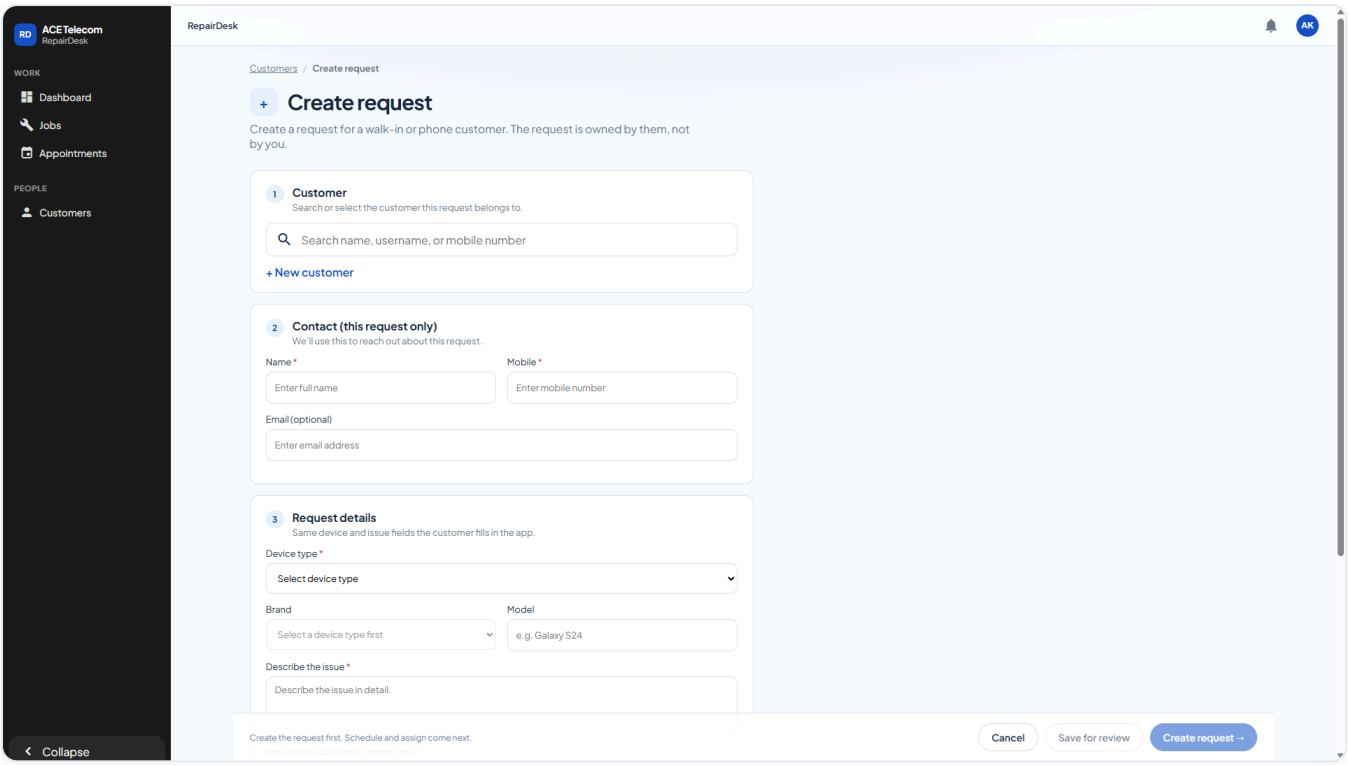

Figure 4. Create request — customer, contact, and device/issue.

5.1 New walk-in customer

1. Click **+ New customer**.
2. Enter Name and Mobile. Username and password are optional.
3. Click **Create customer**.

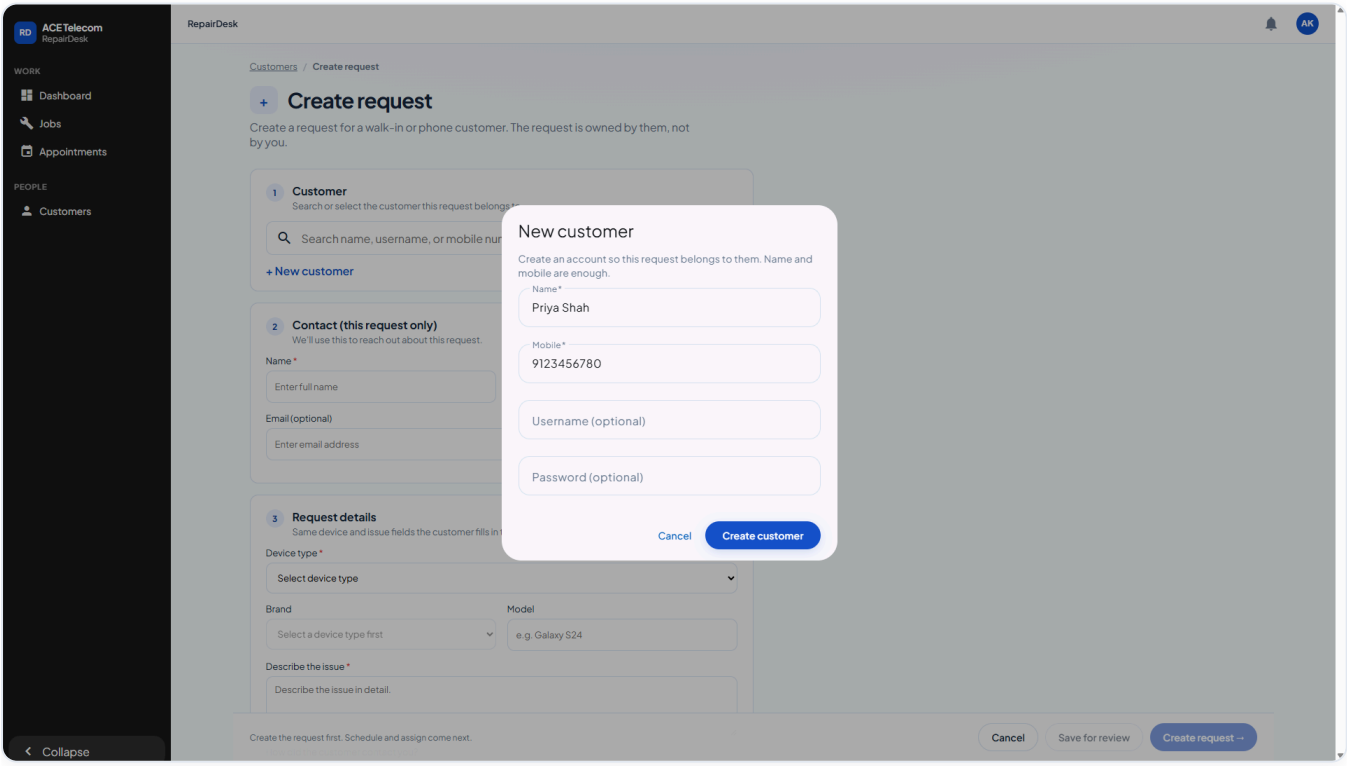

Figure 5. New customer. Name and mobile are enough.

If a password was generated, a dialog shows it once. Give it to the customer for the mobile app. It cannot be retrieved again.

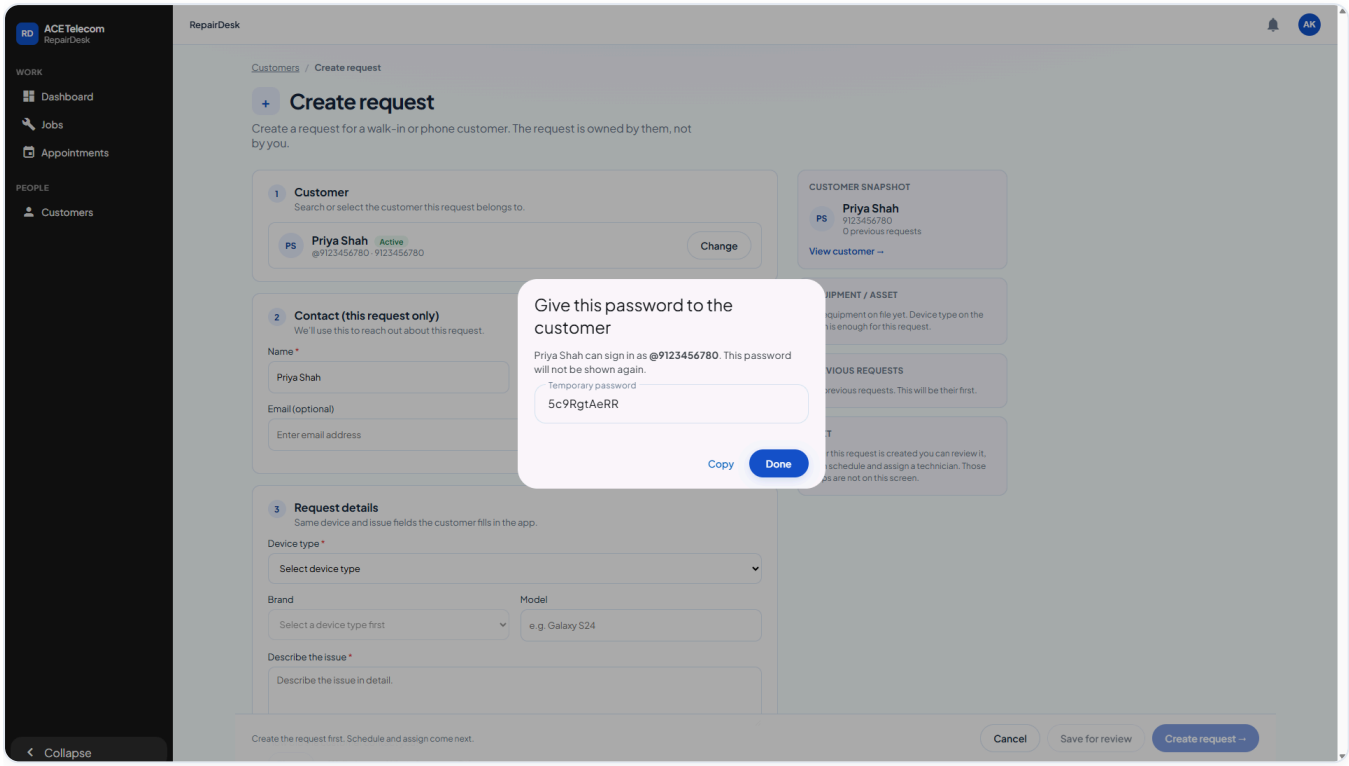

Figure 6. Generated password is shown once. The value in the screenshot is an example only.

5.2 Finish the request

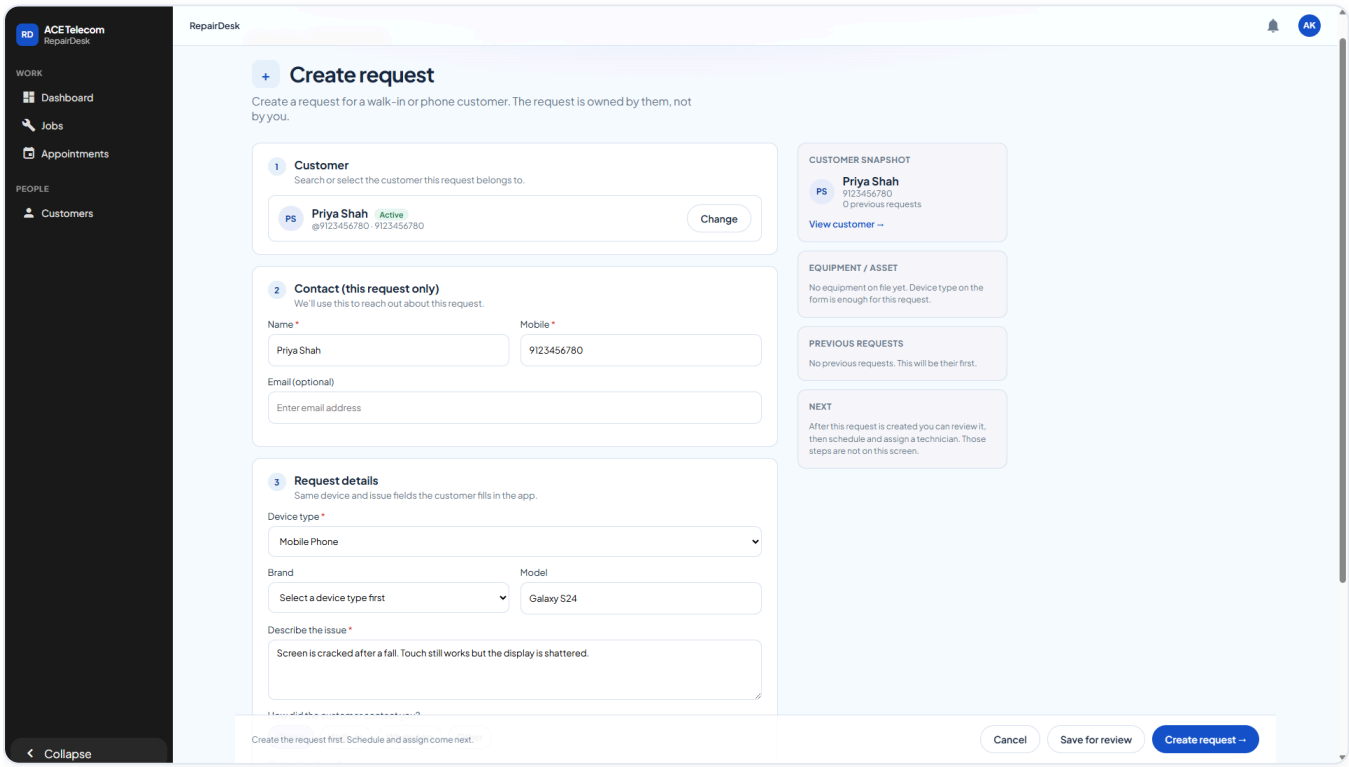

Figure 7. Customer selected, device and issue filled, ready to create.

You land on the customer page. The new request is **Pending review**. There is no job yet.

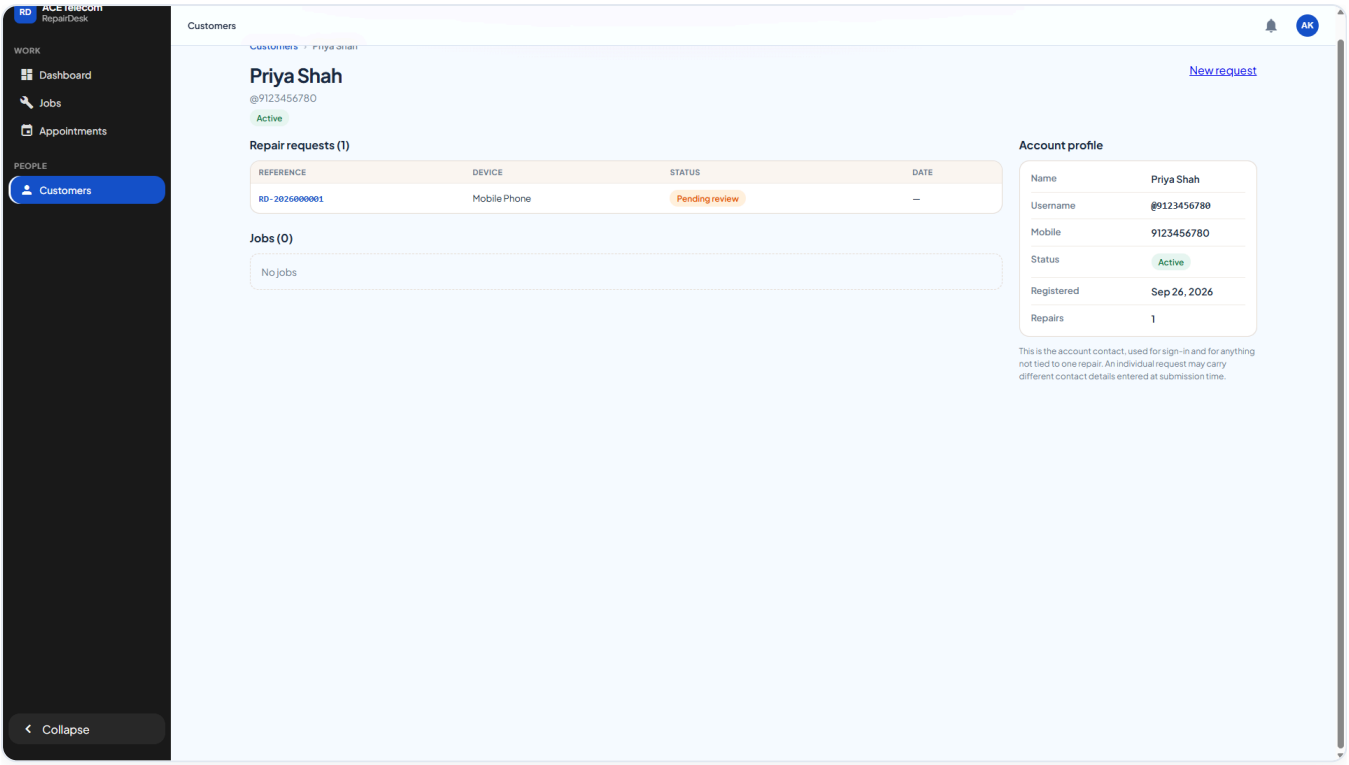

Figure 8. RD-2026000001 pending review. Tell an administrator to approve it.

6. Assign a technician

Assignment is on the **job**. Open Work → Jobs after the request is approved. The job uses the same reference number as the request.

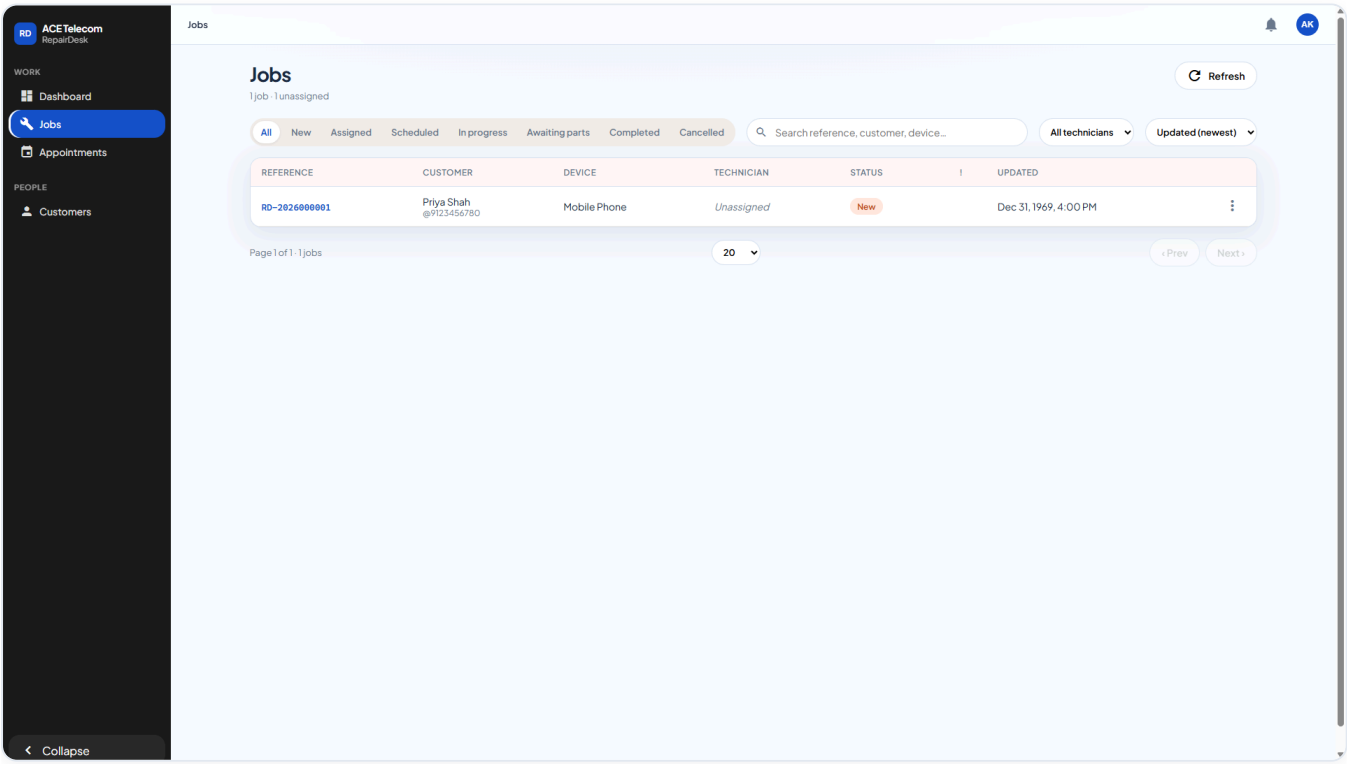

Figure 9. Jobs list. Unassigned jobs are ready to dispatch.

1. Open the job.

2. In the Technician card, click **Assign**.
3. Choose an active technician and click **Assign**.

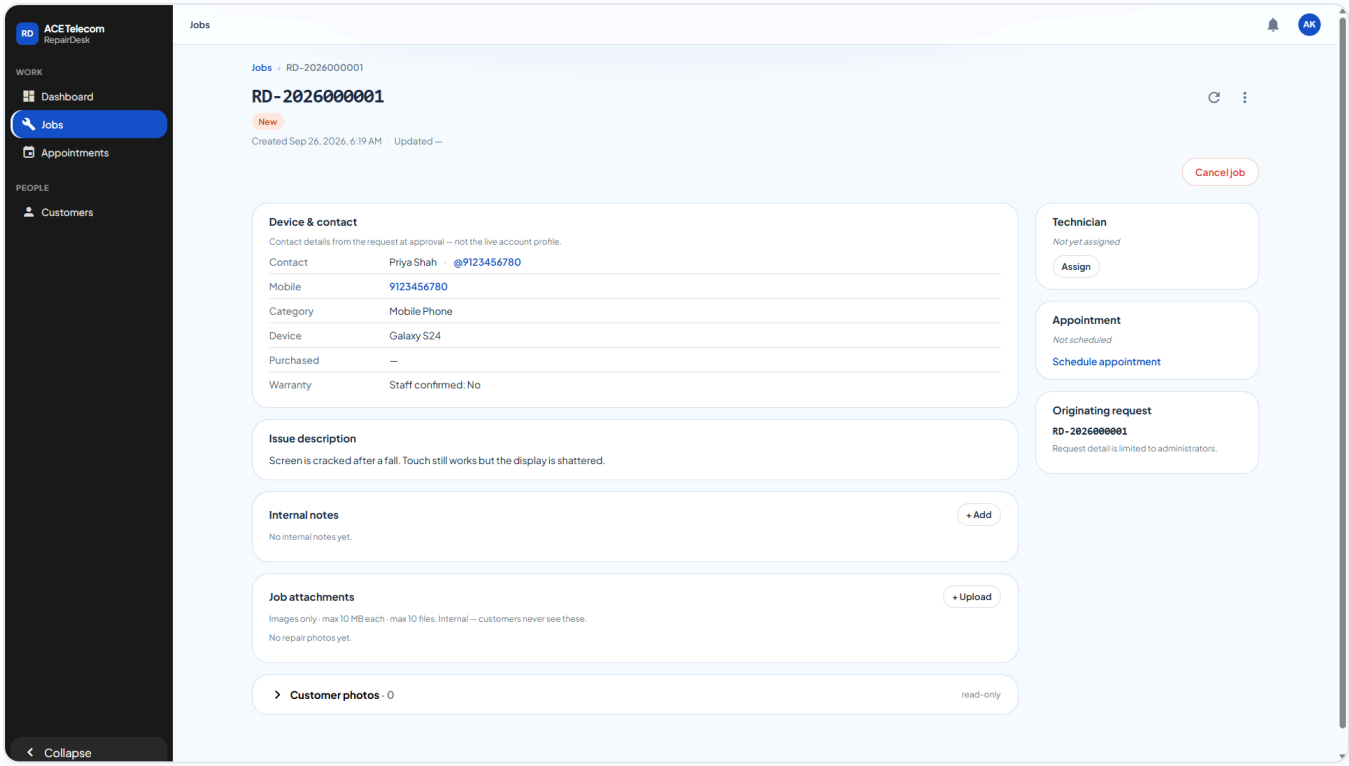

Figure 10. Job detail before assign — Technician says "Not yet assigned".

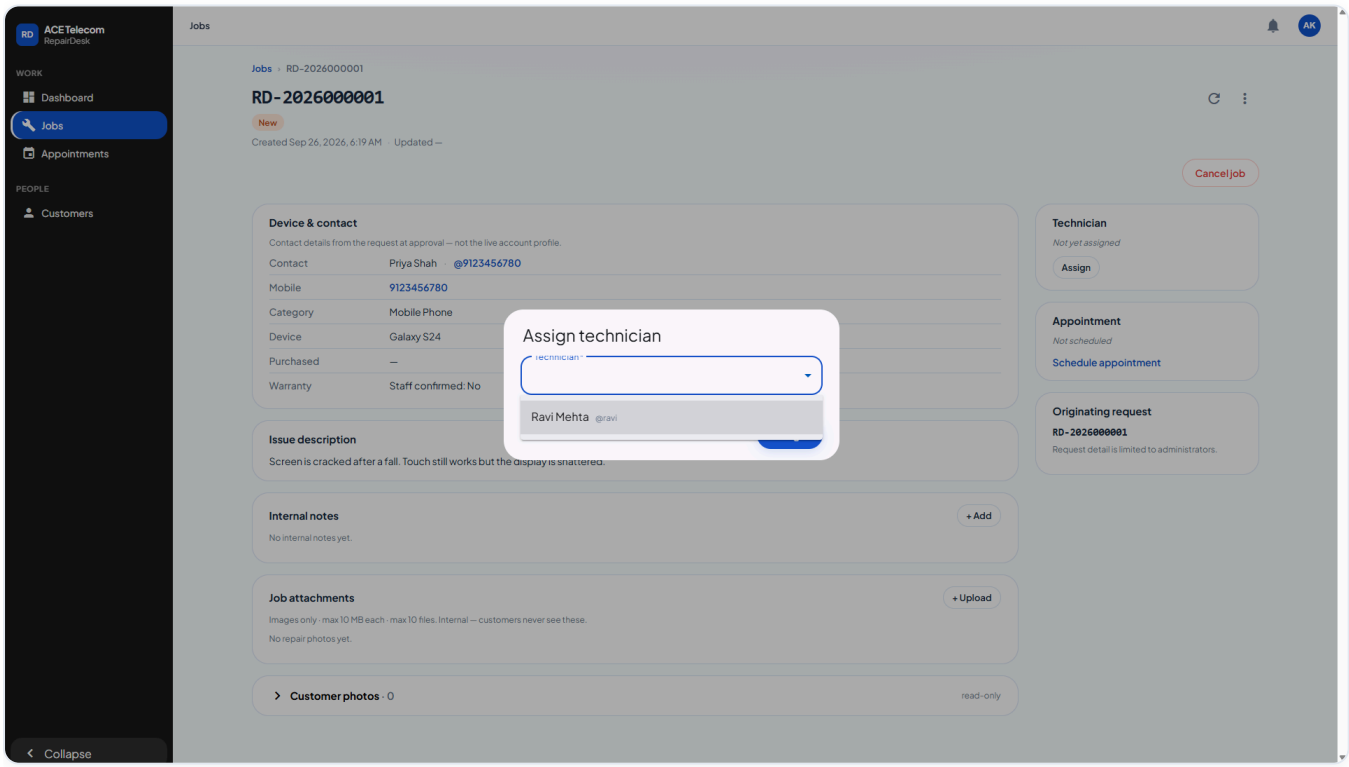

Figure 11. Only active technicians appear (example: Ravi Mehta).

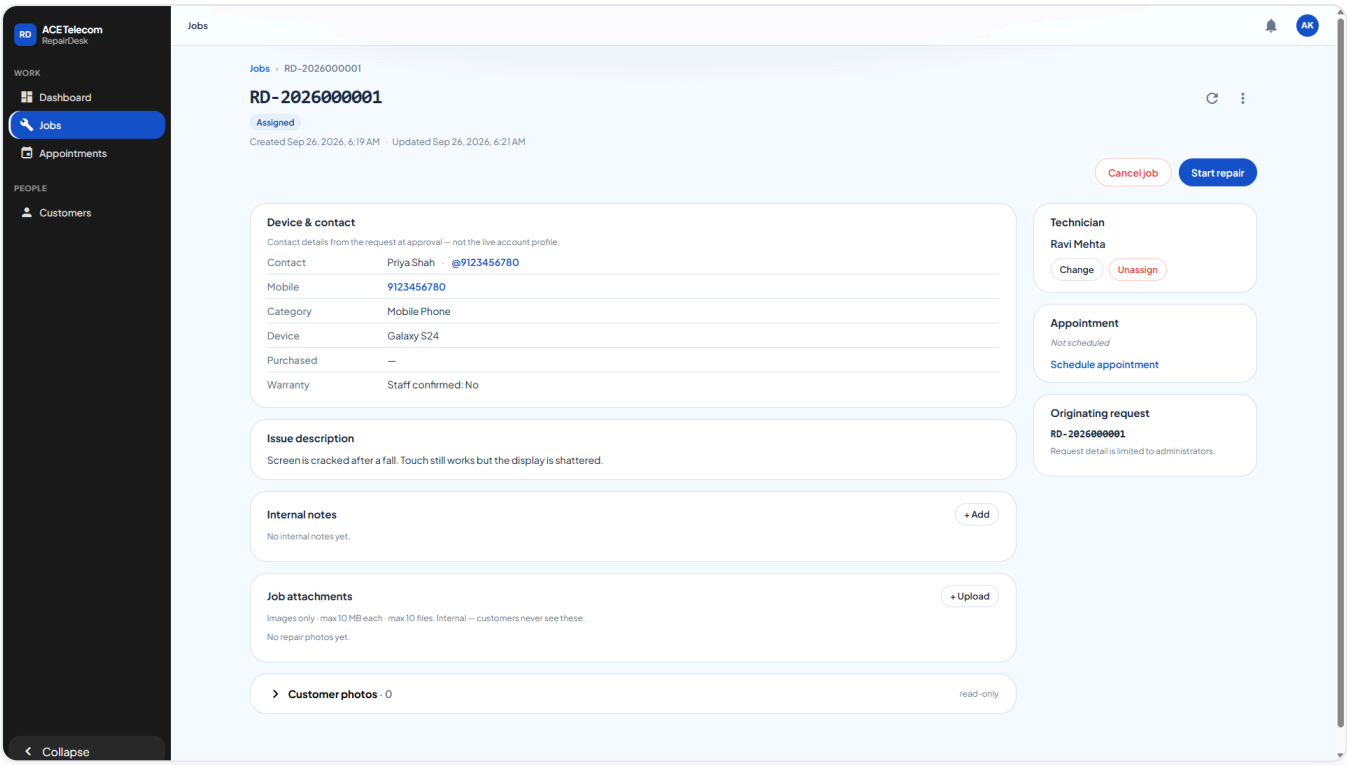

Figure 12. After assign: Change, Unassign, Schedule appointment, Start repair.

7. Other Staff work

7.1 Customers

People → Customers — search by name, username, or mobile. Open a row, then **New request** for another repair.

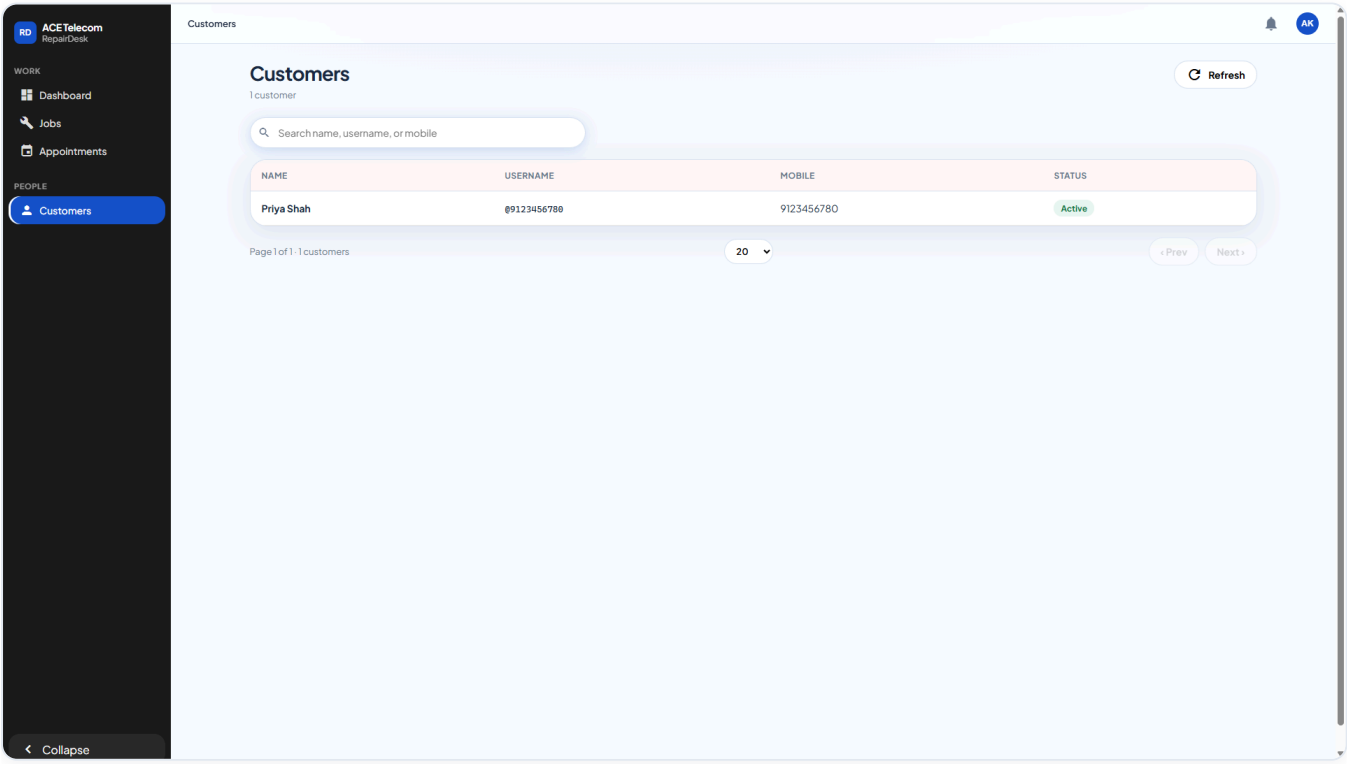

Figure 13. Customers directory.

7.2 Appointments

Work → Appointments — weekly calendar. Unscheduled jobs sit in the right rail. Book from the job or from here.

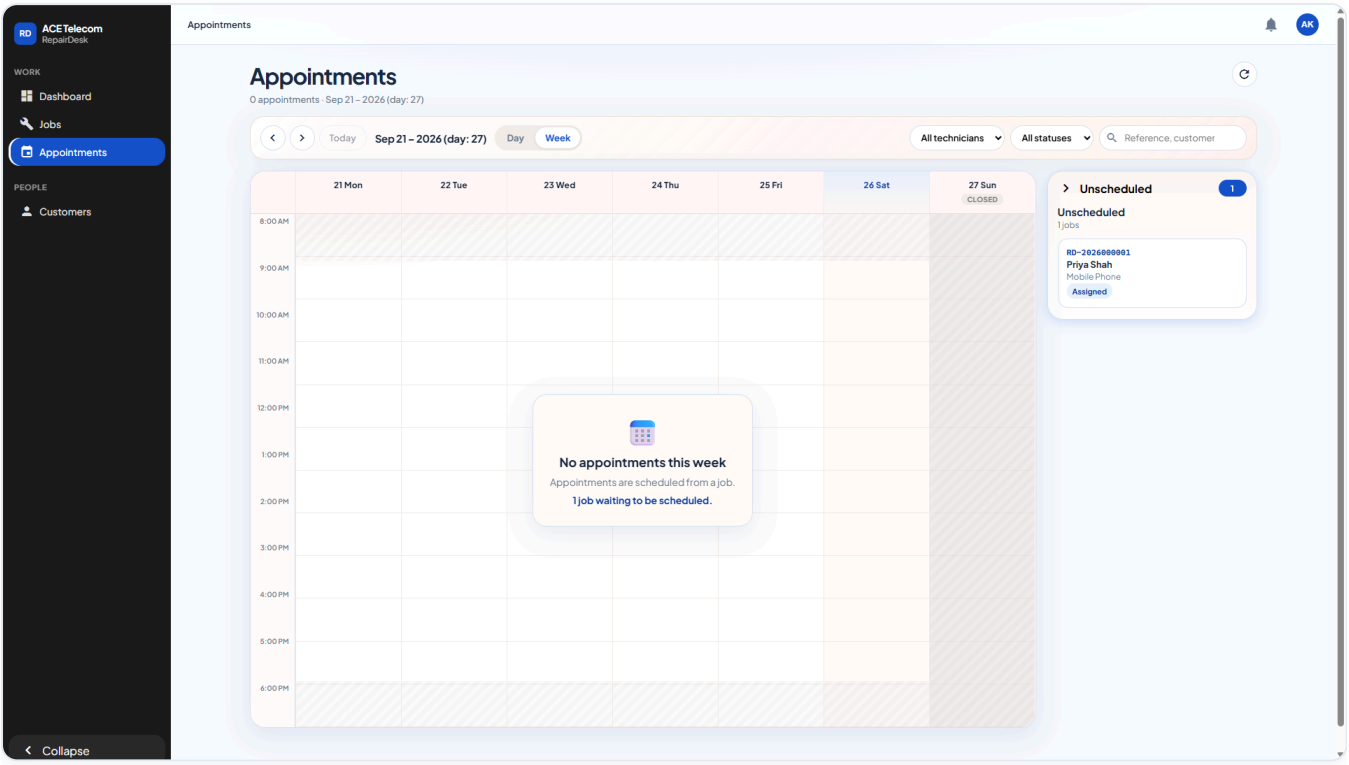

Figure 14. Calendar with an unscheduled assigned job in the rail.

7.3 On the job (after assign)

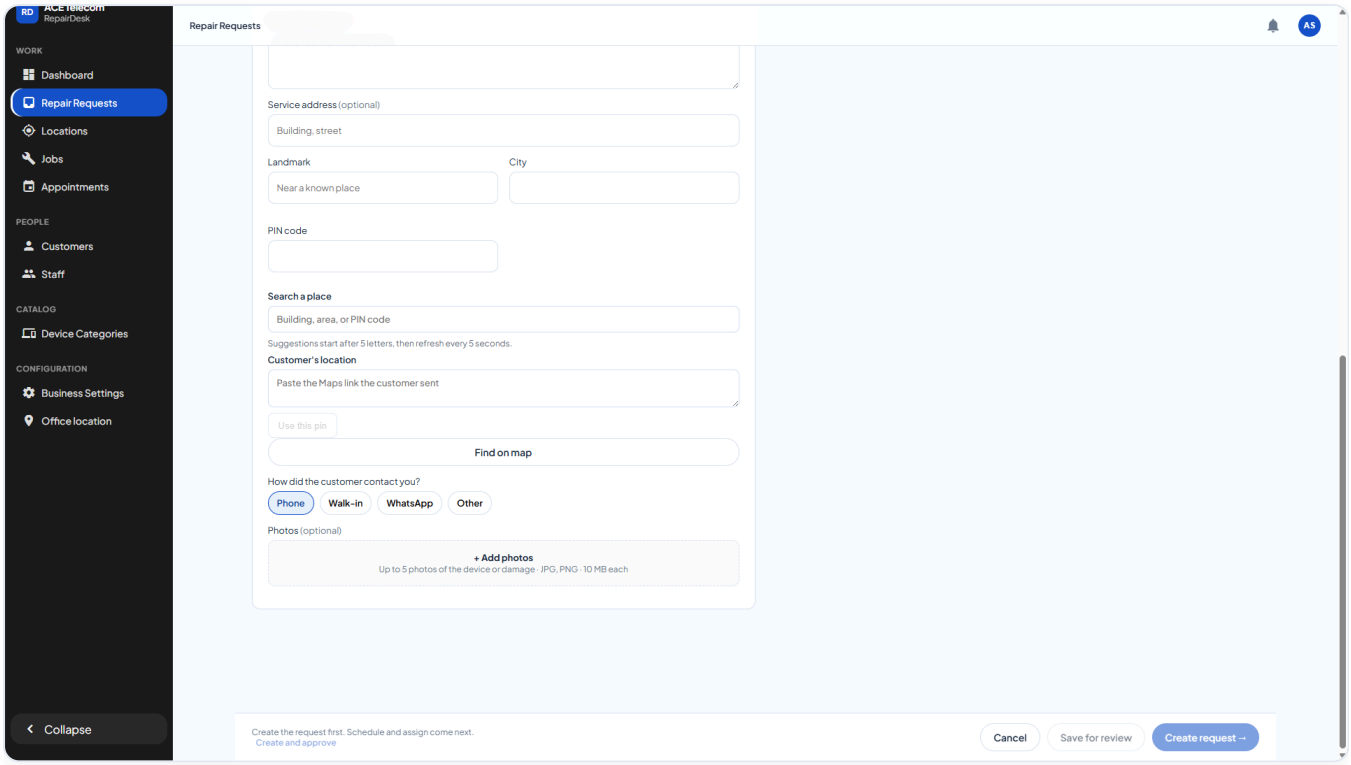

Action	When
Schedule appointment	Book a visit for the assigned technician
Change / Unassign	Wrong technician, or they are unavailable
+ Add (internal notes)	Parts or promises the customer must not see
+ Upload (job attachments)	Bench photos; internal only
Start repair	Usually the technician; Staff can if needed
Cancel job	Work cannot proceed — not undoable

Service address, the job pin, and the technician map

On a new request

The technician follows the pin. Type the address, then search a place (at least 5 letters; the list refreshes every 5 seconds), paste the Maps link the customer sent and click **Use this pin**, or click **Find on map** and drag the pin. A photo of a map is not a pin. A typed area name without a picked building is only the

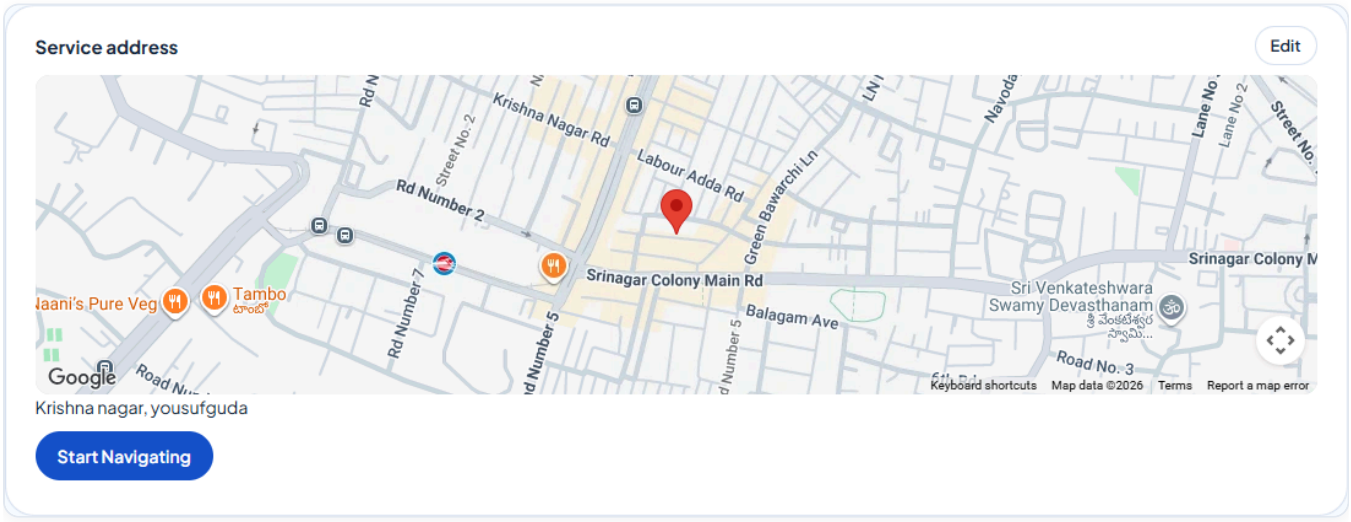

centre of that area.

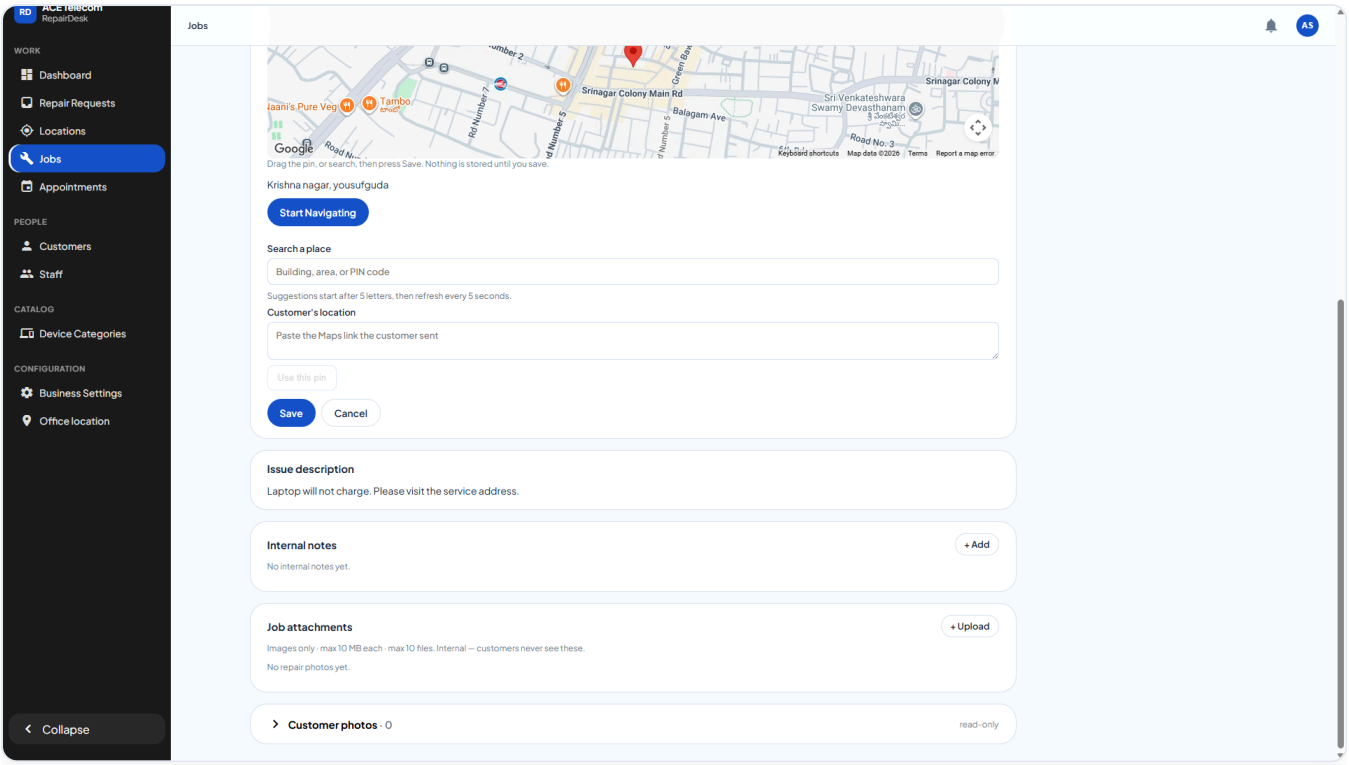

Create request: address, place search, and the customer's Maps link.

On a job

The search box stays hidden until you click **Edit**. Then search, paste the customer's link, or drag the pin, and click **Save**. **Cancel** leaves the stored address unchanged. **Start Navigating** opens Google Maps directions to that pin.

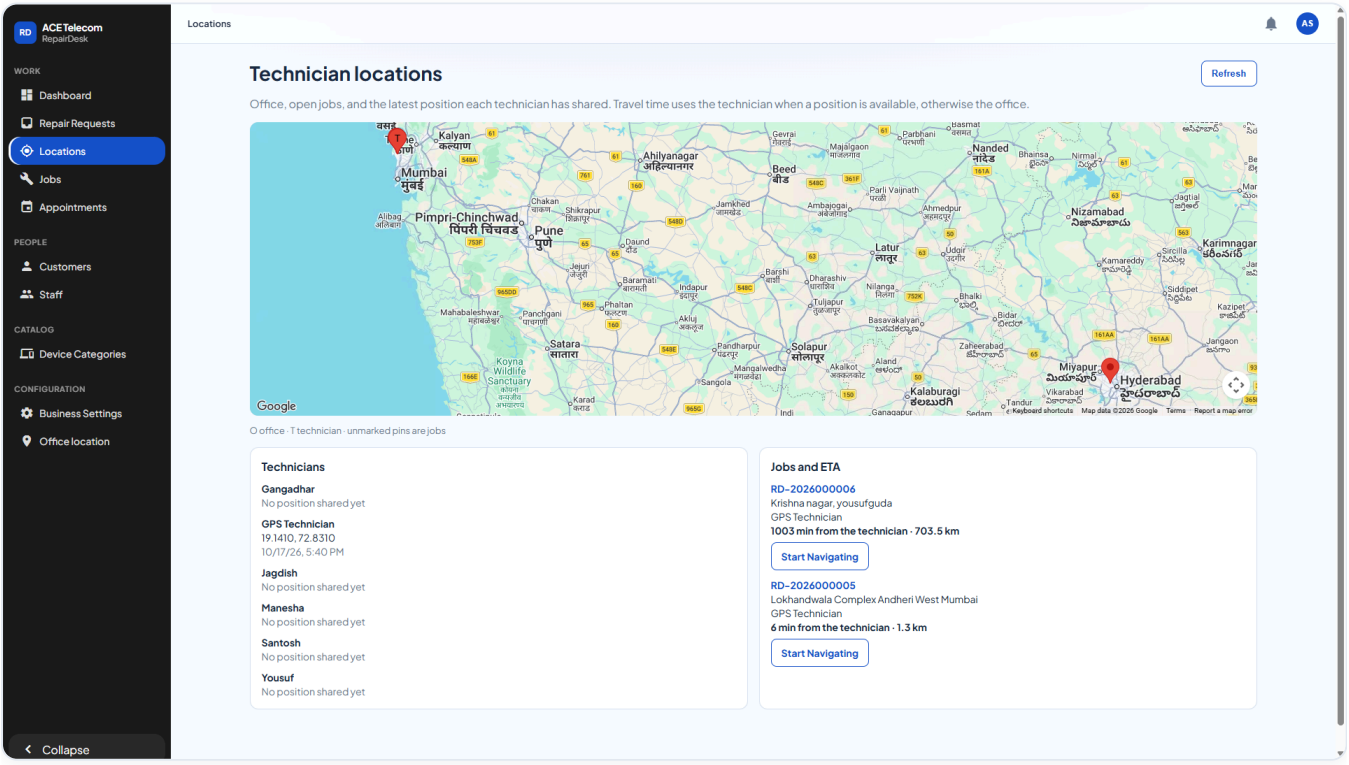

Before Edit: map, address, and Start Navigating.

After Edit: search, customer's location, Save, and Cancel.

Locations

Work → **Locations**. **O** is the shop, **T** is a technician who opened an assigned job with location allowed, and unmarked pins are jobs. Click **Refresh**. Minutes say **from the technician** or **from the office**. A line that says **estimated** is a straight-line fallback. **Start day** is the work-day record on Attendance. It does not move the T pin.

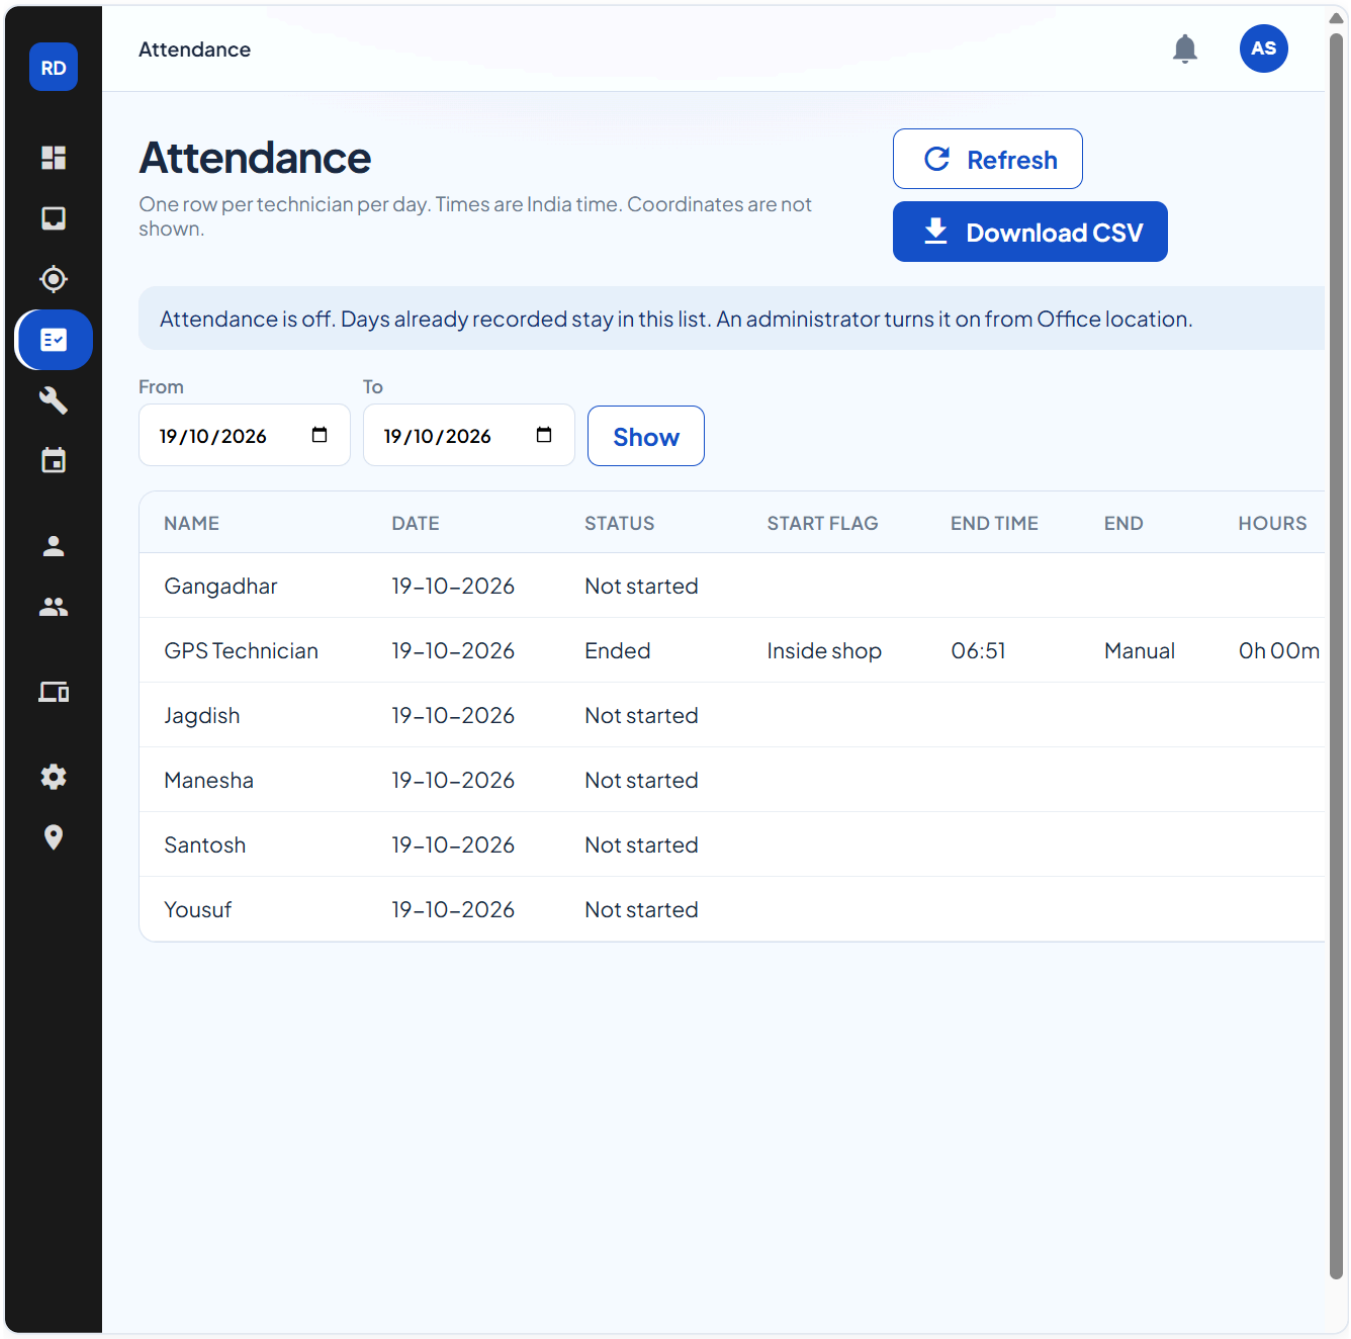

Technician locations, last shared positions, and job travel times.

If the suggestion list does not appear, paste the customer's Maps link or drag the pin. The message **Place search is unavailable** means Google place search is switched off; the map and the customer link still work.

Attendance

Work → **Attendance**. The same list is on the phone under **Attendance** when you are signed in as Staff. Technicians do not see it. The page opens on today in India. One row per active technician, including people who have not started. Coordinates are not shown.

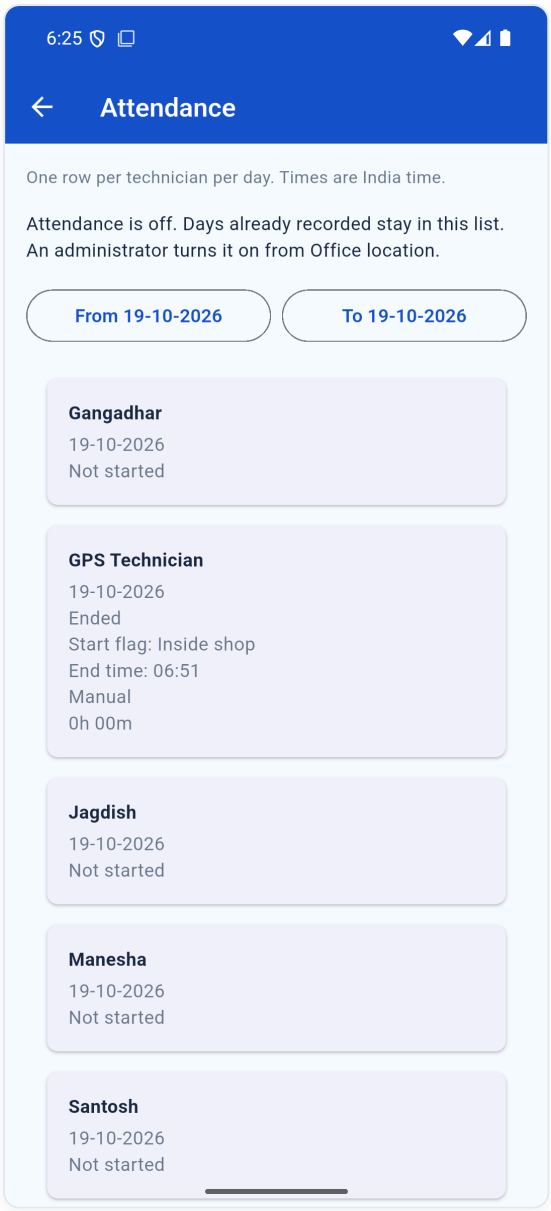

Attendance in the portal. Times are India time. Download CSV saves these columns.

Column	What it shows
Status	Not started, On duty since a time, Ended, or Auto-ended
Start flag	Inside shop, Outside shop, Location uncertain, Location missing, or Mocked location
End	Manual when they tapped End day. Auto when the shop’s end-of-day time closed it
Hours	Time between start and end, for example 7h 40m

Set **From** and **To**, then **Show**. The range can cover at most 31 days. A longer range says **Date range must be 31 days or less.**

While Attendance is off, the list still opens. The notice says an administrator turns it on from Office location. Days already recorded stay in the list. You cannot change the switch.

After an administrator turns Attendance on and saves, the technician’s home screen shows **Work day**. **Start day** stores the time and whether they were at the shop. A fix is clear when its accuracy is no wider than the shop radius. A clear fix outside the shop circle is refused unless the office allows a start outside the shop. **End day** always closes an open day. At 19:00, unless the office changed that time, an open day closes by itself and the technician gets one in-app notice. Opening a job, Start Repair, and Start Navigating do not check the work day.

The same list on the staff phone. Pull down to refresh. There is no CSV download on the phone.

8. Quick reference

Item	Value
Portal	https://repairdesk-admin-portal.azurewebsites.net
Move a job pin	Job → Edit → Save
Where technicians are	Work → Locations → Refresh
Who started the day	Work → Attendance. Download CSV for the same columns
Staff username	`anita`
Staff password (after first change)	`Anita$1234`
Create a request	Dashboard → Create request
Assign a technician	Jobs → open the job → Assign
Look up a customer	People → Customers
Book a visit	Job → Schedule appointment
Request review / approve	Administrator only
Staff / catalog / settings	Administrator only
Issue description	Minimum 10 characters
