ACE TELECOM · REPAIRDESK

Technician App User Manual

Find your jobs on the phone, start and end the work day, read the map, tap Start Navigating, and start and finish repairs.

AUDIENCE

Field / bench technicians

APP

RepairDesk for Android

USERNAME AND PASSWORD

You will get these from your Administrator

SCREENSHOTS

RepairDesk Android app, signed in as Technician

This guide is only about the RepairDesk phone app. An Administrator creates your account and gives you the app, a username, and a temporary password. Change the password from Account after your first sign-in. Allow location when the phone asks. The job still opens if GPS is off.

Contents

1. Access and sign-in
2. My work and the work day
3. Start, pause, and complete a repair
4. Notes and photos
5. The map and Start Navigating
6. How the shop sees where you are
7. Appointments, notifications, and password

1. How you get access

An **Administrator** creates your Technician account and gives you the RepairDesk app (APK file or install link), your **username**, and a **temporary password**.

> You will get these details from the Admin. Do not invent a login and do not use the **Register** link on the sign-in screen — that is for customers. If you cannot sign in, ask the Admin to check that your account is Active and that they sent the right username.

Field	Value
App	Provided by your Administrator
Username	Provided by your Administrator
Temporary password	Provided by your Administrator
Role	Technician

The first sign-in after the server has been idle can take up to a minute. If it looks stuck, wait and try once more.

Allow location when the phone asks. Opening a job then shares one position so the shop can estimate travel time. The job still opens if you deny location or the GPS fix is weak.

2. Sign in

1. Open the **RepairDesk** app.
2. Enter the **Username** and **Password** from your Admin. Tap the eye icon to show or hide the password.
3. Tap **Sign In**.

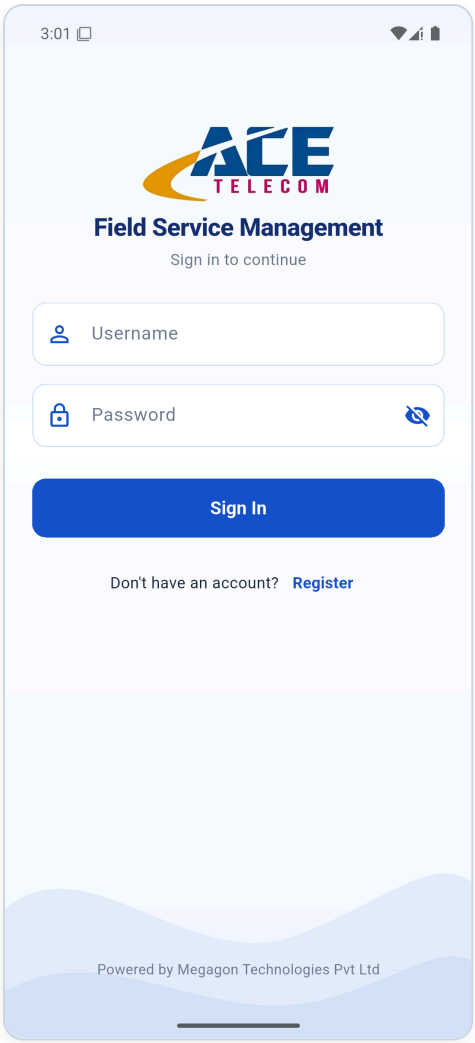

Figure 1. Sign-in screen.

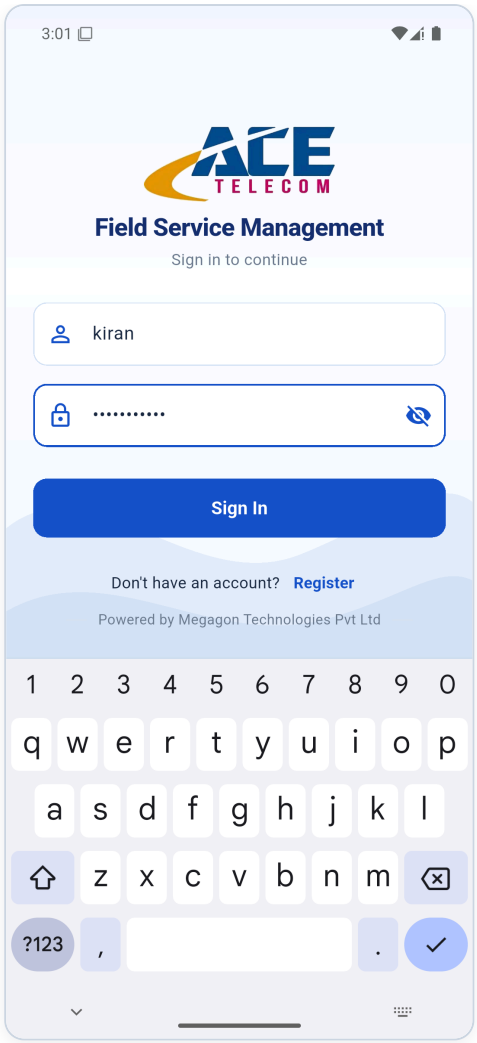

Figure 2. Username and password from your Admin.

After your first sign-in, change the temporary password (see section 11).

3. Home — My work

You land on **My work**. The line under it confirms your role: *Role: TECHNICIAN — jobs and appointments assigned to you.*

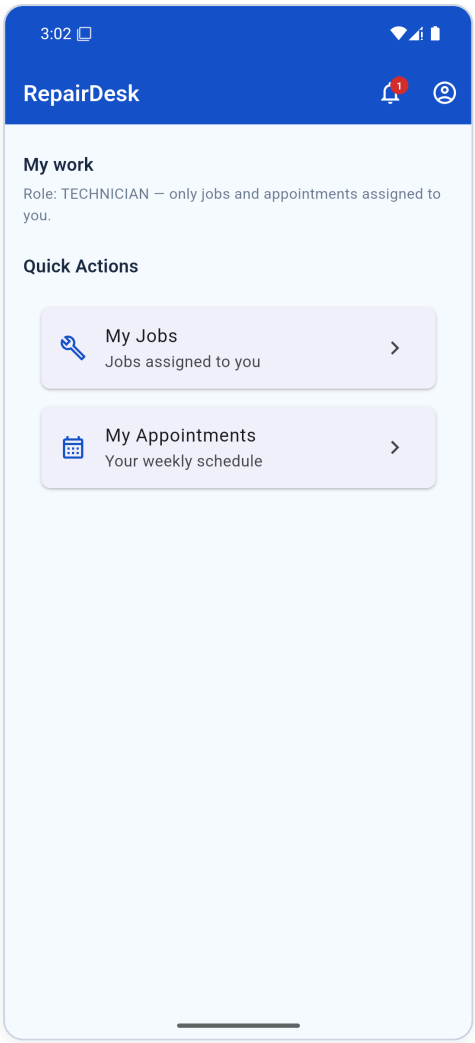

Figure 3. Technician home while Attendance is off. My Jobs and My Appointments only.

Item	What it does
My Jobs	Jobs assigned to you
My Appointments	Your weekly schedule
Bell icon (top right)	Notifications; the red badge shows how many are unread
Person icon (top right)	Your account, password, and Sign Out

Your home screen has **My Jobs** and **My Appointments**. You do not see Locations, Attendance, or Office location. While Attendance is off, those two tiles are the whole home screen. While an administrator has turned Attendance on, a Work day card sits above them.

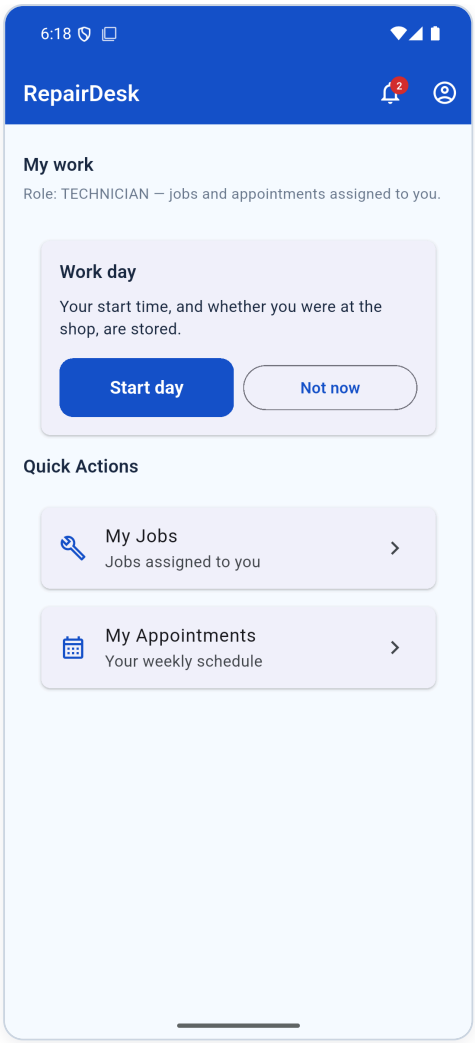

What a Technician can and cannot do

You can	You cannot (Staff or Admin does it)
See jobs assigned to you	Create a walk-in / phone request
See the map and address on the job	Move the job pin. You do not see Edit
Tap Start Navigating and follow the route in Google Maps	Search for a place, paste a Maps link, or drag the pin
Start, pause for parts, and complete a repair	Assign or unassign a technician
Add internal notes and bench photos	Schedule or reschedule a visit
See visits booked for you	Cancel a job
Share one position by opening the job	See the Locations map
Start and end the work day when Attendance is on	See other technicians' days, turn Attendance on, or open Office location

If My Jobs is empty, nothing is assigned to you yet. Ask Staff or an Admin to assign the job.

4. Work day

The **Work day** card is on My work only while an administrator has turned **Attendance** on. While it is off, home stays My Jobs and My Appointments.

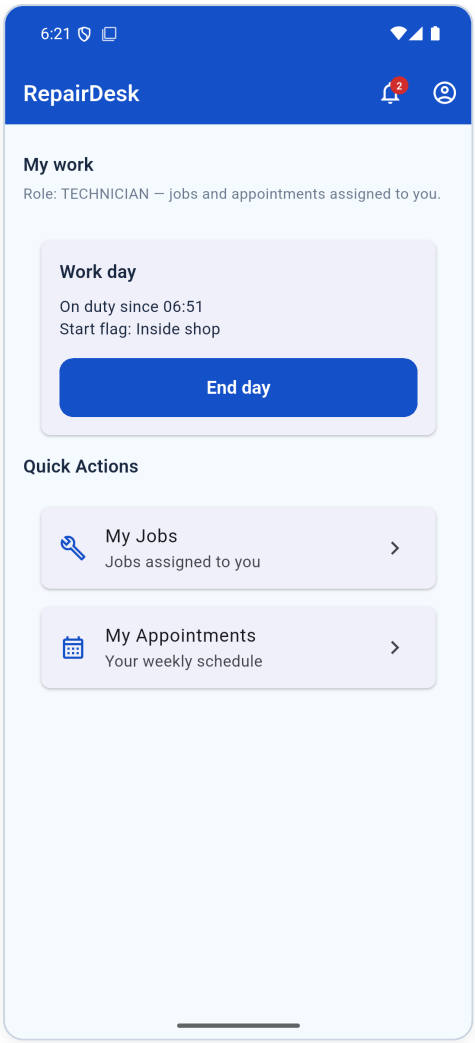

Work day before you start. The line says what is stored.

The card says: *Your start time, and whether you were at the shop, are stored.*

1. Tap **Start day**. The phone checks location for up to 8 seconds.
2. Tap **Not now** to leave the day unstarted. The card then says **Work day not started**. Your jobs stay available.

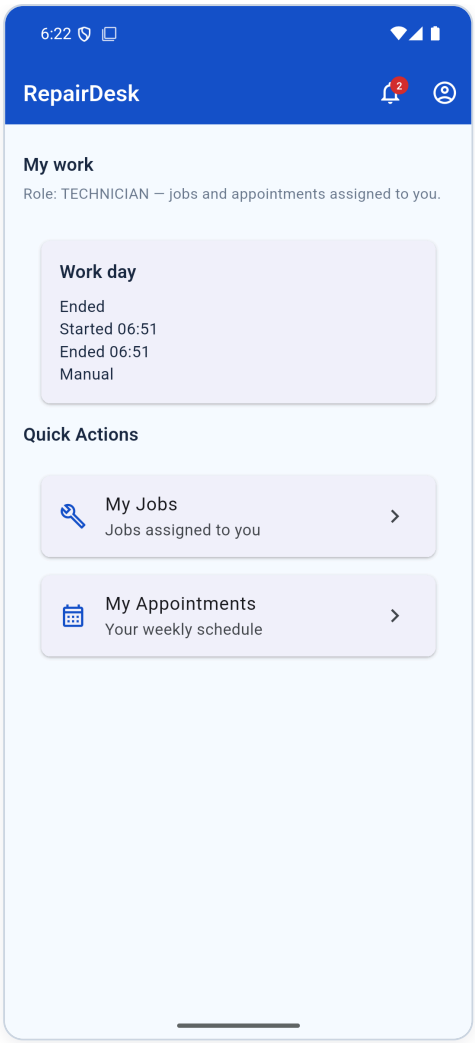

A fix is clear when its accuracy is no wider than the shop radius.

What the phone finds	What happens
A clear fix at the shop	The day starts. The card says On duty since a time, and Start flag: Inside shop
A clear fix away from the shop	The day is not saved. The card says how many metres you are from the shop. If the shop allows a start outside the shop, the day starts and the flag is Outside shop
No fix, a fix too wide to trust, or no shop pin	The day still starts. The flag is Location missing or Location uncertain
A mocked location	The day still starts. The flag is Mocked location

On duty, started inside the shop. End day is available.

End day closes the day, including away from the shop. The card then says **Ended**, the start and end times, and **Manual**. A second Start day on the same India date shows the day already saved. It does not open a second day.

After End day. The start flag from the morning is kept on the shop's list.

If you are still on duty at the shop's end-of-day time (19:00 unless the office changed it), the day closes by itself. The card says **Auto-ended**. You get one notification. The job stays as it is.

> Start Repair, opening a job, and Start Navigating do not wait for a started day.

5. My Jobs

Tap **My Jobs**. You see only your assignments.

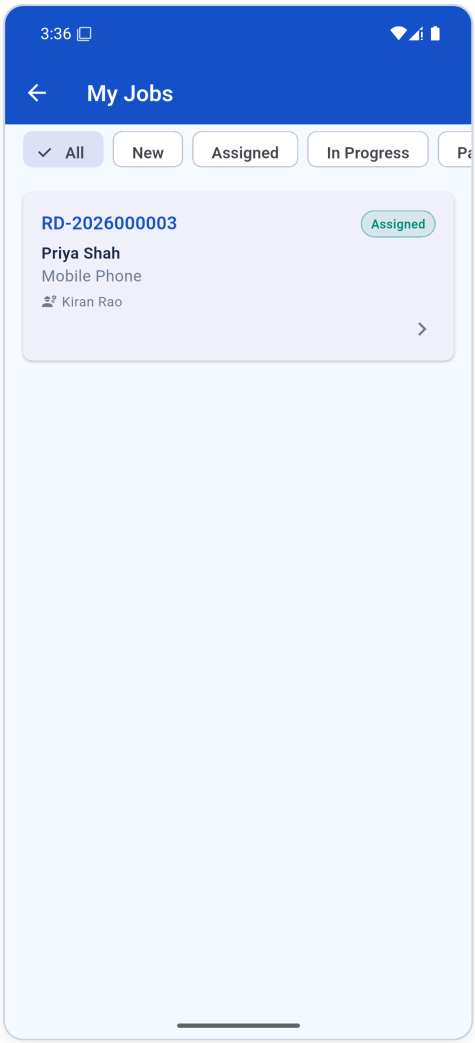

Figure 4. My Jobs. Filter by status with the chips at the top; tap a card to open it.

- Filter chips: **All · New · Assigned · In Progress · Parts** … (swipe left for more)
- Each card shows the reference (for example `RD-2026000001`), status, customer, device category, and your name

The same reference number follows the repair from the customer's request to the finished job.

6. Work a job

The **Job Detail** screen shows the device and customer contact, the issue, who it is assigned to, your actions, internal notes, customer photos, and attachments. Scroll down for the map (section 6).

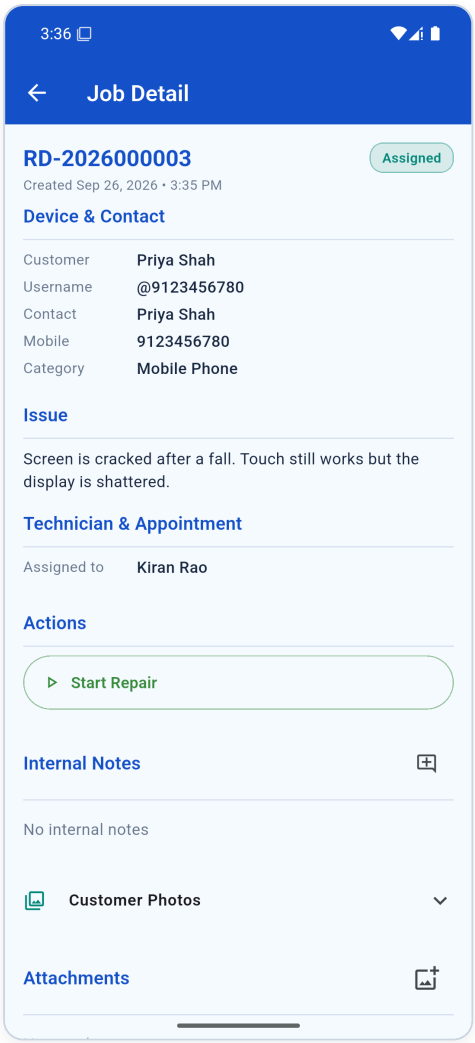

Figure 5. A job assigned to you. The main action is Start Repair.

> Booking or moving a visit is done by Staff or Admin. If you need one, ask them.

6.1 Start the repair

When the job is **Assigned** or **Scheduled**:

1. Tap **Start Repair**.
2. The app asks you to confirm. Tap **Start Repair** again to begin, or **Not now** to leave the job as it is.

The job moves to **In Progress**, a short *Start Repair — done* message appears, and the customer may be notified.

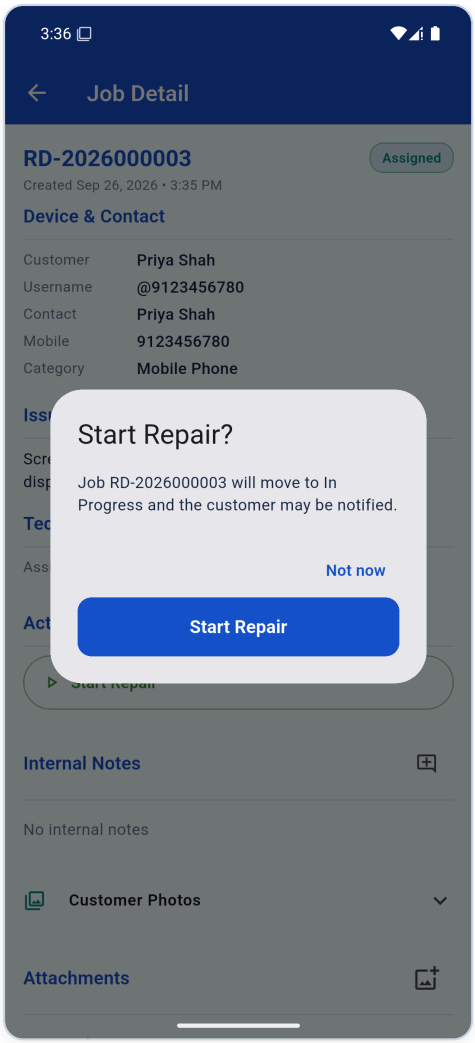

Figure 6. Confirm before work starts.

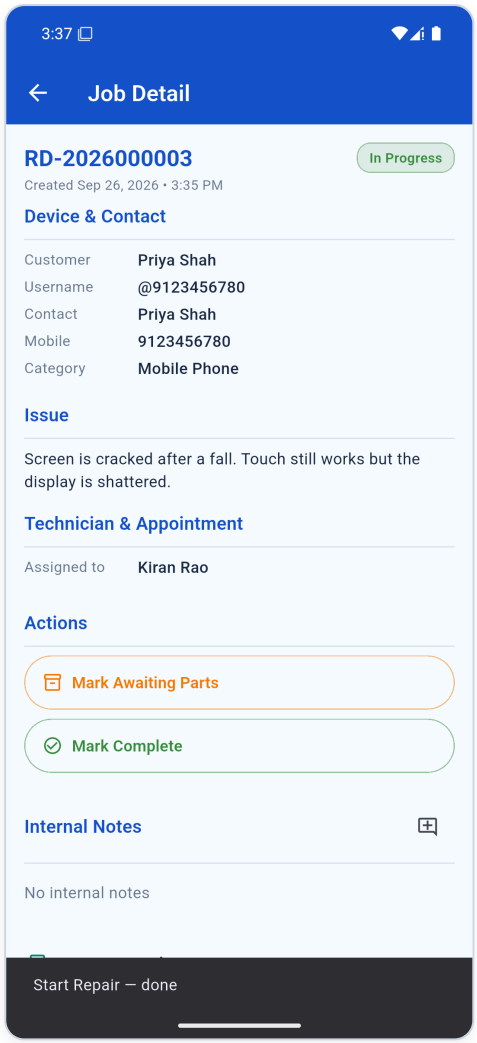

Figure 7. In Progress — new actions appear.

6.2 While you work (In Progress)

Action	When
Mark Awaiting Parts	You cannot finish until a part arrives
Resume	Shown while the job is Awaiting Parts — tap it when the part is in
Mark Complete	The repair is done — enter a short resolution summary

If a job should be cancelled, tell Staff — only Staff or Admin can cancel a job.

6.3 Internal notes

Notes are for the shop only — the customer never sees them. They are permanent and attributed to you.

1. Tap the note icon next to **Internal Notes**.
2. Type the note (parts ordered, delays, findings).
3. Tap **Save** (or **Cancel** to discard).

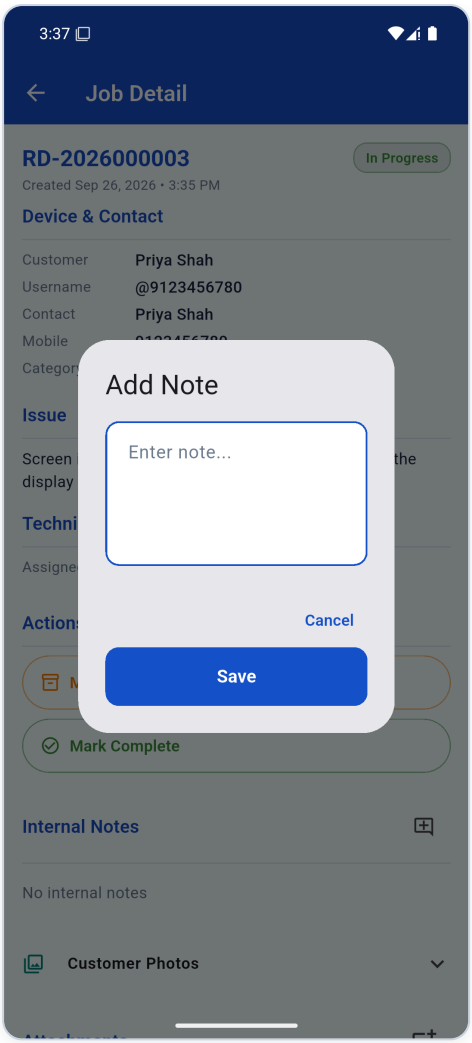

Figure 8. Add Note.

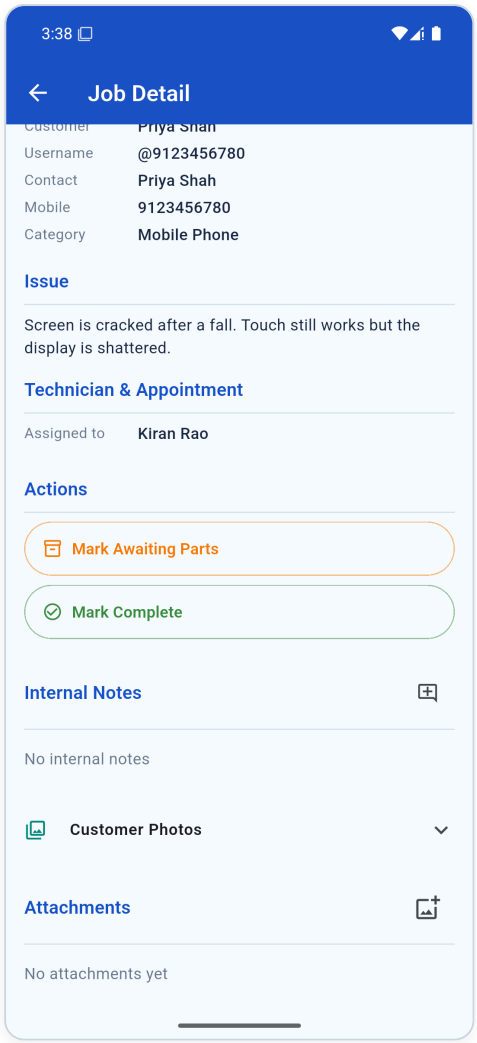

Figure 9. Notes, Customer Photos, and Attachments.

6.4 Customer photos and attachments

- **Customer Photos** — anything the customer attached to the request. Tap to expand. Read-only.
- **Attachments** — your bench photos. Tap the add-photo icon to take or pick an image. Customers never see these.

7. The map and Start Navigating

Scroll the job until the map appears. It sits above the written address. You follow this pin. You do not type a new address on the job.

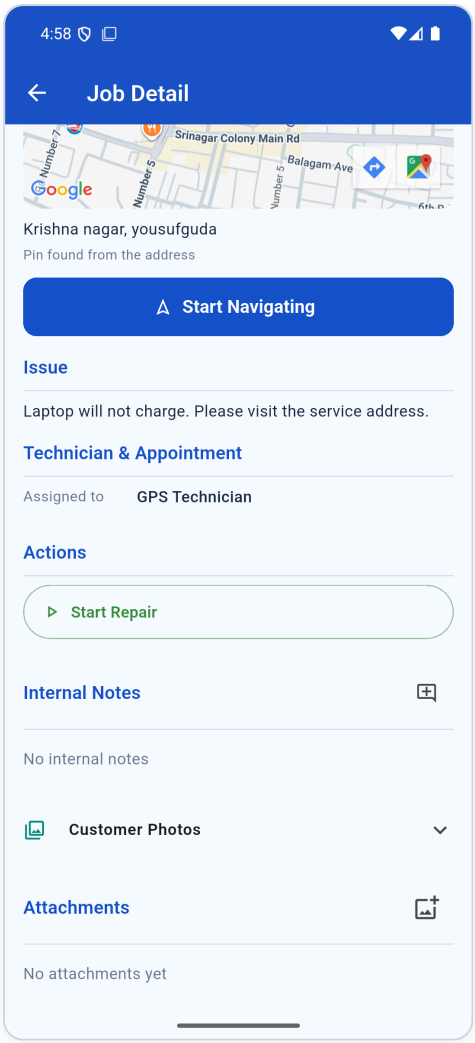

Figure 10. The job map, the saved address, how the pin was chosen, and Start Navigating.

On that part of the screen you see a map with one pin, the address Staff or an Admin saved, a short line that says how the pin was chosen, and a blue **Start Navigating** button.

Line under the address	Meaning
Pin found from the address	Someone searched or used Find on map when they saved the job
Pin placed on the map	Someone dragged the pin
Pin from the customer's location link	Someone pasted the Maps link the customer sent
No address yet	A visit address has not been saved. Ask the shop before you leave

You do not see **Edit**. You cannot search, paste a link, or drag the pin. If the pin is the wrong door, call the shop and ask them to move it, then open the job again. A photo of a map in a chat is not a pin.

How to start navigation

1. Open **RepairDesk** and sign in.
2. On **My work**, tap **My Jobs**.
3. Tap the job you are going to.
4. Scroll until you see the map and the blue **Start Navigating** button.
5. Tap **Start Navigating**.
6. **Google Maps** opens. The destination is the saved pin. Driving is already selected. **Your location** is the start when Maps is allowed to use the phone's location.
7. Check the time and distance. They change with where you are standing.
8. Tap **Start** at the bottom of Google Maps and follow the turn-by-turn route.

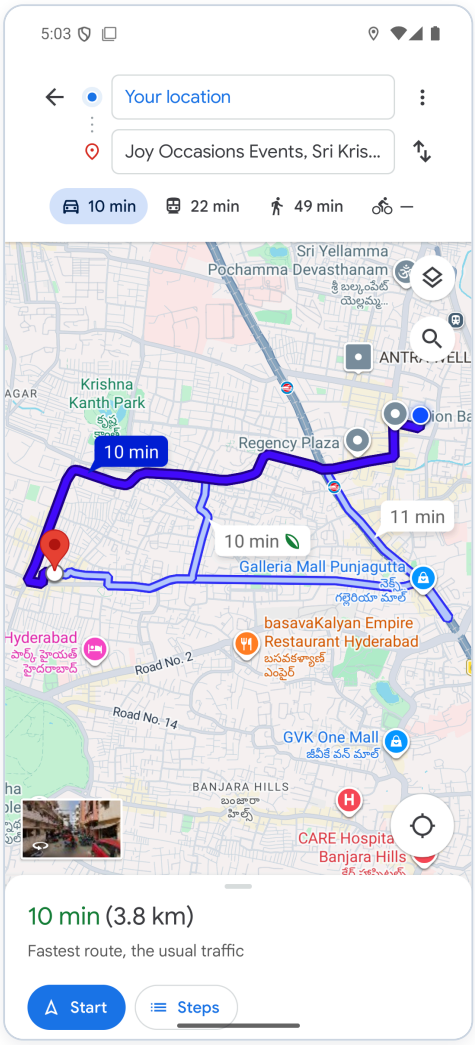

Figure 11. Google Maps after Start Navigating. Driving is selected. Tap Start to follow the route. The minutes change with where you are.

The name in the destination box is Google's name for that pin. It can be a nearby shop or colony name. It is still the pin saved on the job. The route runs from the blue dot (you) to the red pin (the visit).

If Google Maps is not installed, the same directions open in the phone's browser. The destination is still the saved pin.

If Maps asks you to choose a start, location is off for Google Maps. Allow location for Maps, or pick a start yourself. RepairDesk still opens the job if its own location permission is denied.

The first time Maps opens it may offer to sign in (“Take the shortcut”). You can skip that. The route works without a Google sign-in.

8. How the shop sees where you are

Opening an assigned job is what shares your position for the shop’s Locations map. That share is separate from the work day. There is no separate “share location” button.

1. Allow location for RepairDesk when the phone asks.
2. Open the assigned job. That sends one position.
3. Leave for the visit with **Start Navigating**.

If the fix fails or location is off, the job stays usable. The shop then estimates travel from the office instead of from you.

You only appear on jobs assigned to you. You do not see other technicians, and you do not see office settings.

9. My Appointments

From home, tap **My Appointments**. This is your weekly schedule; use the arrows at the top to move between weeks. You only see visits booked for you. Staff book those from the job.

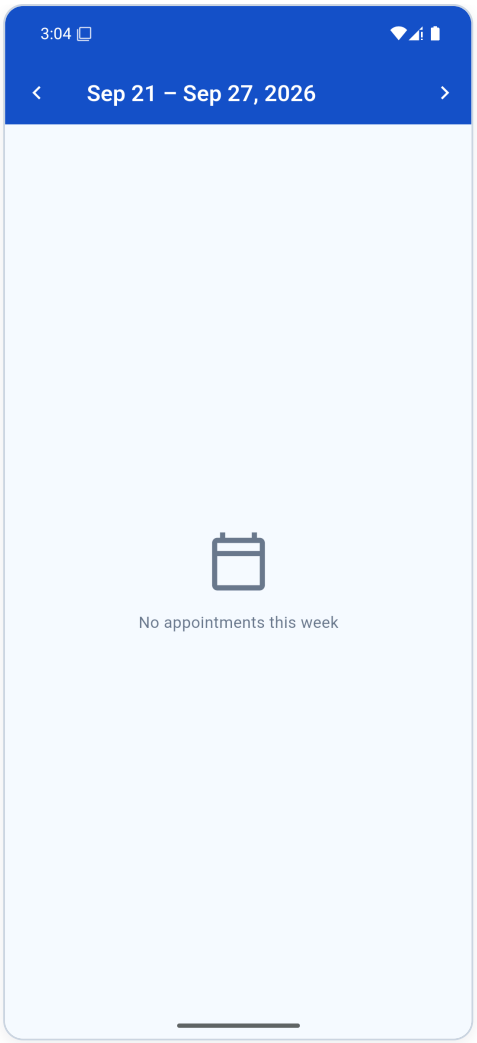

Figure 12. Weekly schedule. Empty means nothing is booked yet.

No appointments this week means nothing is scheduled for you yet. The job can still appear under My Jobs — Staff may assign you before they book a slot.

10. Notifications

Tap the **bell** on the home screen. You are notified when a job is assigned to you and when something changes on your jobs. Tap a notification to open the job; tap **Mark all read** to clear the badge.

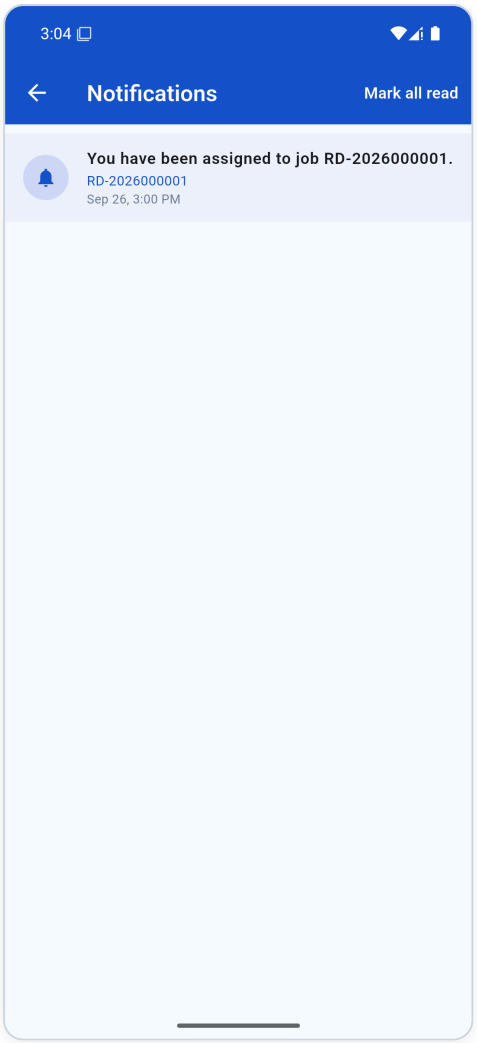

Figure 13. Notifications.

11. Account and password

Tap the **person** icon on the home screen to open **Account**. It shows your name, username, role, and mobile number.

Change your password

Do this right after your first sign-in, so only you know your password.

1. Tap **Change Password**.
2. Enter your **Current password** (the temporary one from the Admin).
3. Enter a **New password** (minimum 8 characters) and confirm it.
4. Tap **Change**.

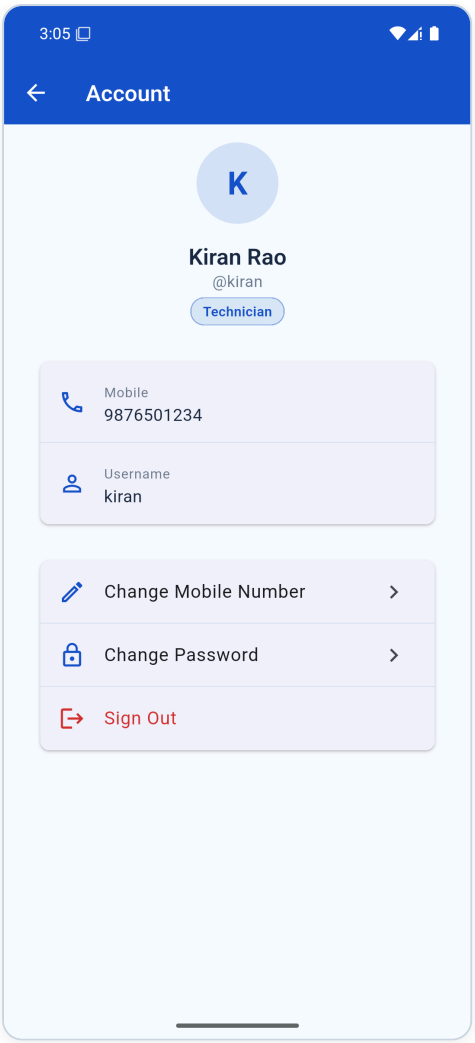

Figure 14. Account.

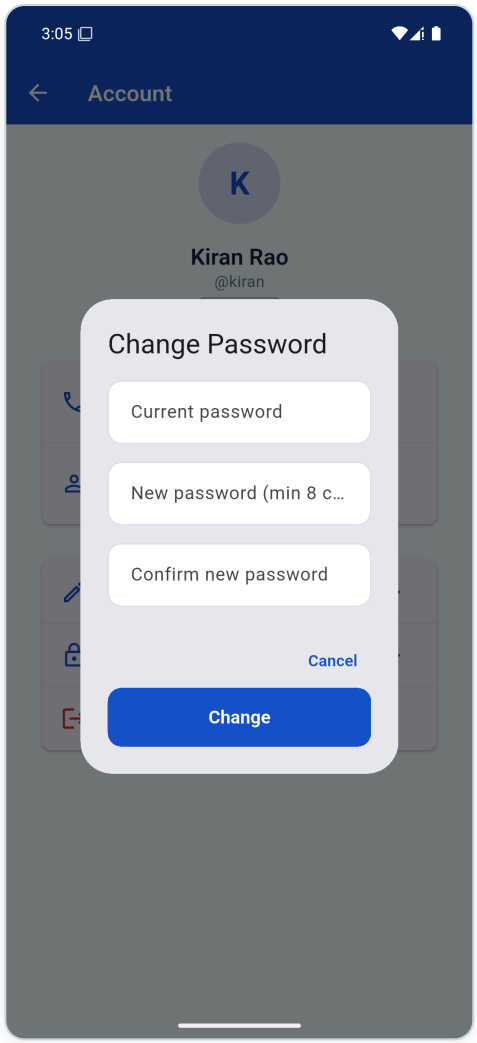

Figure 15. Change Password.

If you forget your password, ask the Admin to reset it. **Sign Out** is at the bottom of the Account screen — sign out if you share the phone.

12. Quick reference

Item	Where
Username and password	From your Administrator
After first sign-in	Account → Change Password
Forgotten password	Ask the Admin to reset it
Location permission	Allow it. The job still opens if GPS is off
Your jobs	Home → My Jobs
Map and address	On the job, above Start Repair
Start navigation	Job → Start Navigating, then Start in Google Maps
Wrong door	Ask the shop to move the pin. You cannot move it
So the shop can see you on the map	Open the job with location allowed
Work day	Home, when Attendance is on → Start day, then End day
Start work	Job → Start Repair, then confirm
Waiting on parts	Job → Mark Awaiting Parts, later Resume
Finish	Job → Mark Complete
Notes	Job → note icon next to Internal Notes
Bench photos	Job → Attachments → add-photo icon
Your schedule	Home → My Appointments
Alerts	Home → bell icon
Create request / assign / schedule / cancel / move the pin	Staff or Admin — not on your app
Attendance list and the Attendance switch	Staff or Admin. You only see your own Work day card, and only while Attendance is on
